Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
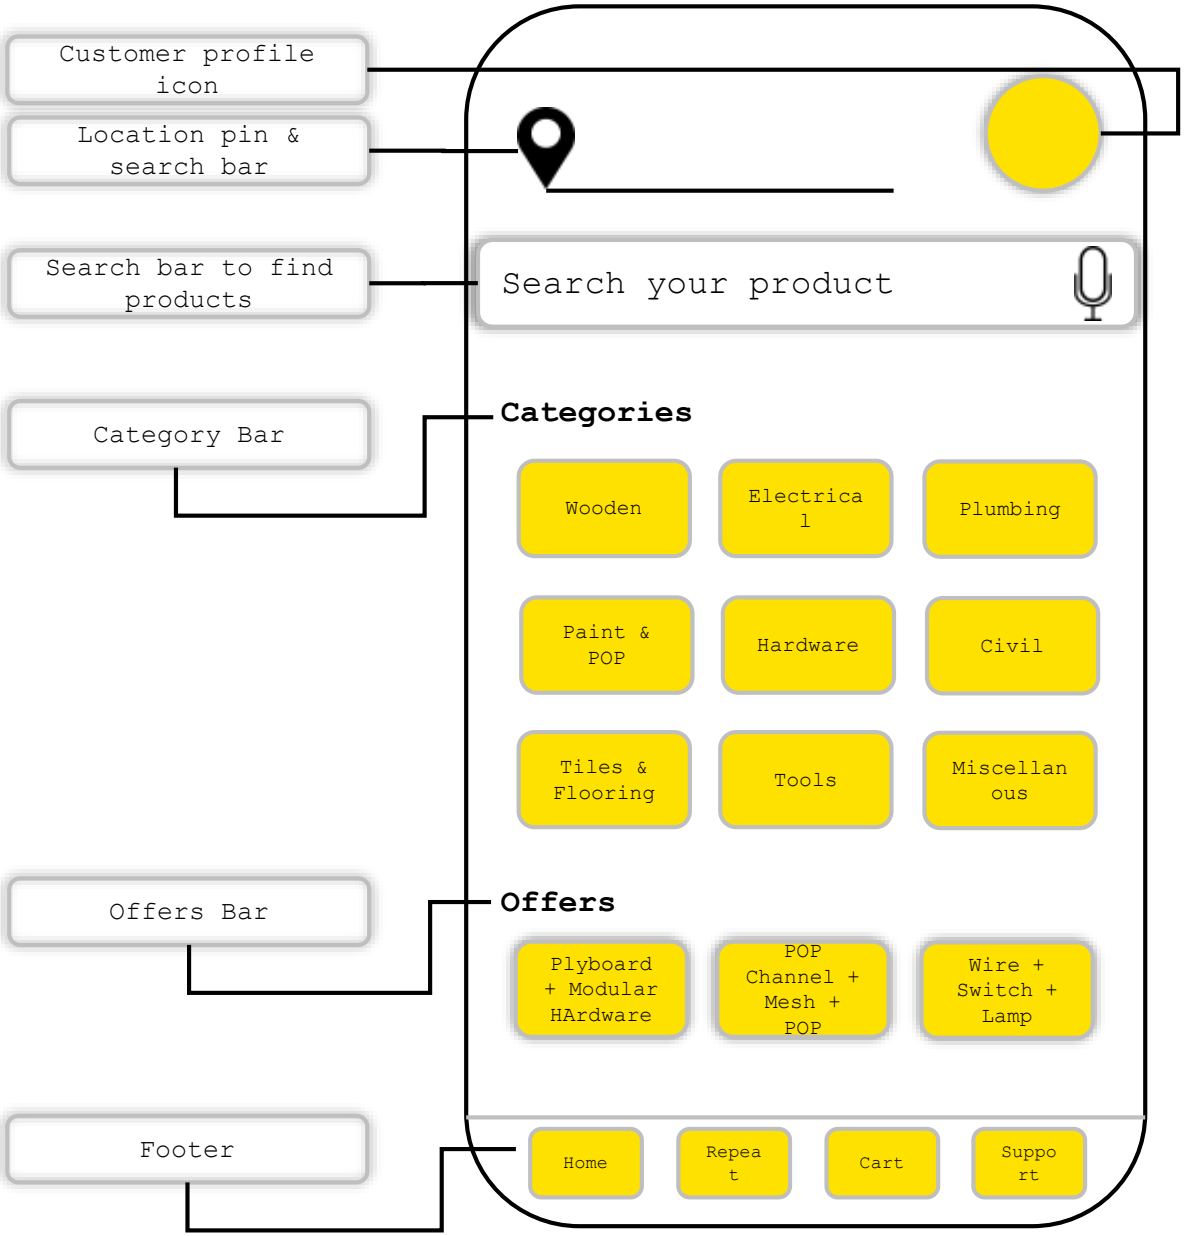
User shall be able to receive the OTP on their phone, provided they have running connection.	• Users shall receive an OTP via **SMS within 5-10 seconds** if they have a working network. • The OTP should be **auto-read and auto-filled** when permissions are granted. • If auto-read fails, users should be able to **manually enter the OTP**.
OTP shall be read and input directly from the messages	• The OTP should be **time-bound and expire after X minutes.** • Users should receive an **error message** if an incorrect OTP is entered. • Users should have a **"Resend OTP"** option, with a cooldown period to prevent abuse. • After **multiple failed OTP attempts (e.g., 5 tries)**, users should be temporarily blocked and asked to try again later. • OTP input and validation should happen **within 2 seconds** after submission. • The interface should clearly **show OTP entry errors and available alternatives.**
In case the user is unable to receive message, there shall be provision to allow them to request call for confirmation.	• If the OTP is not received within **30 seconds**, a **"Request Call"** button should appear. • Clicking **"Request Call"** should trigger an **automated call** with the OTP. • The OTP via call should be the **same as the SMS OTP** and valid for a set time (e.g., 5 minutes).
On clicking **continue as guest**, the user shall be taken to the landing page	On clicking the **continue as guest**, the user shall be taken to the Landing Page.
Have clickable Terms and Conditions & Privacy Policy	Upon clicking Terms and Conditions, & Privacy Policy, the banner shall open with key pointers with option to click more to read.

Home and Search Screen

Landing Page



What does this screen do?

- Provides user with easy access to the location, search, categories and combos.
- Also provides quick link to **Repeat Orders, Cart and Support Icon.**
- Picks combos from the backend data and suggests curating new combos (to admin) basis the buying trends (items bought together)

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Customer Profile Icon directs customer to their account screen.	Clicking on the icon takes the user to their account screen
Location Pin and bar allows customer to allow us to find their location (Geo Area)	The app should detect the user's location within a **50-meter radius.** Users should have an option to **manually adjust the pin** if detection is inaccurate.
Location Pin to pop up a form to update address and details.	Users can **search and select** their delivery location using a **Google Maps API** or manual entry. Entered addresses should be **auto-suggested** from map data. The app should prompt users for **location access** with a clear explanation. If the user denies access, the app should fall back to **manual entry.**

Search Bar for products to be searched using their Name, Brand, Product Code. The search shall accommodate misspellings (Hinge spelled as Hyng or Hing etc)	• **Search Functionality**
	  • Users can search by **Product Name, Brand, or Product Code.**
	  • Supports **misspellings** (e.g., "Hinge" can be found if typed as "Hyng" or "Hing").
	  • Case-insensitive and updates **in real-time** with auto-suggestions.
	• **Performance & Accuracy**
	  • Results should load **within 2 seconds.**
	  • Prioritizes **exact matches,** followed by **partial and fuzzy matches.**
	  • Suggests **alternative products** if no exact match is found.
	• **Filters & Sorting**
	  • Users can **filter results** by category, price range, brand, and availability.
	  • Sorting options: **Price (low to high/high to low), Popularity, and Relevance.**
	• **User Experience & Error Handling**
	  • The search bar should be **easily accessible** and mobile-optimized.
	  • If no results are found, users get **alternative suggestions.**
	  • Handles **network failures** with a retry option.

Mic in the search bar to assist text to speech for running the search.	• A **Microphone Icon** is present inside the search bar for voice search activation. • Users can **tap the mic icon** and speak to search for products by **Name, Brand, or Product Code.** • The tool must support **speech-to-text conversion** accurately, handling **accents and variations.** • It should accommodate **common mispronunciations** (e.g., 'Hinge' spoken as 'Hinj' or 'Hing'). • Search results should appear within **2 seconds** of voice input processing.

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Categories Bar to show all categories in tiles layout (3 X 3)	• The Categories Bar should display **all categories in a 3x3 tile layout.** • If number of category increases, there shall be option to scroll the category section to view other categories as well. • Each tile should have an **icon and category name** for easy identification. • Users should be able to **scroll horizontally** if there are more than 9 categories. • Clicking on a category tile should **navigate to the respective product listing page.** • The Categories Bar should be **visually prominent** and adapt to different screen sizes. • Categories should load **within 2 seconds** under normal network conditions.
The categories upon clicking shall guide them to category screen	• Clicking a category tile should **navigate the user to the respective category screen.** • The category screen should display **relevant subcategories or product listings.** • Navigation should be **instantaneous**, with the screen loading within **2 seconds.** • The category screen should have a **clear breadcrumb trail** for easy navigation back. • If no products exist in a category, an appropriate **empty state message** should be shown.
Offers Bar for products or categories paired together, shown in tiled form.	• The Offers Bar should display **curated product or category pairings** in a tiled format. • Each tile should include **a product image, discount percentage, and a call-to-action button** (e.g., 'Shop Now'). • Users should be able to **scroll horizontally** to view multiple offers. • Clicking on an offer should **navigate the user to the respective product or category page.** • Offers should be **dynamically updated** based on promotions and trending products.

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Footer bar to host icons for quick actions	The footer bar should host icons for quick navigation to essential sections (e.g., Home, Repeat, Cart and Bulk Order). Provision to change this from backend Icons should be clearly labeled and easy to identify. Footer bar should be fixed at the bottom of the screen for easy accessibility. Clicking an icon should instantly navigate to the respective section. Active icons should be highlighted to indicate the current selection. Footer bar should be responsive and work across all screen sizes. The design should ensure no overlap with page content.
Home, brings them back to Landing page	Clicking the **Home button** should instantly navigate the user to the **Landing Page.** The transition should be **smooth and without delay** (loads within **2 seconds**). The Landing Page should always reflect the **latest product listings, offers, and categories.** If the user is already on the Landing Page, clicking **Home should refresh the content.**
Repeat, takes them to screen with previous order to repeat the orders, as it is	The **Repeat** icon should be present in the footer navigation bar on landing page. Clicking the **Repeat** icon should navigate users to a **Previous Orders** screen displaying past orders.
Cart, takes them to their shopping kart screen.	The **Cart** icon should be present in the footer navigation bar on all screens. Clicking the **Cart** icon should navigate users to their **Shopping Cart** screen. The cart should display all added products with **product name**

What does this screen do?

- Allows user to search for the product or speak in their requirement for system to convert that to search rule.
- Option to attach, scan or record their order (recording is different from search).
- Throw dynamic product suggestions depending on previous buying,
- Show trending products for the region.

Requirement & Acceptance Criteria

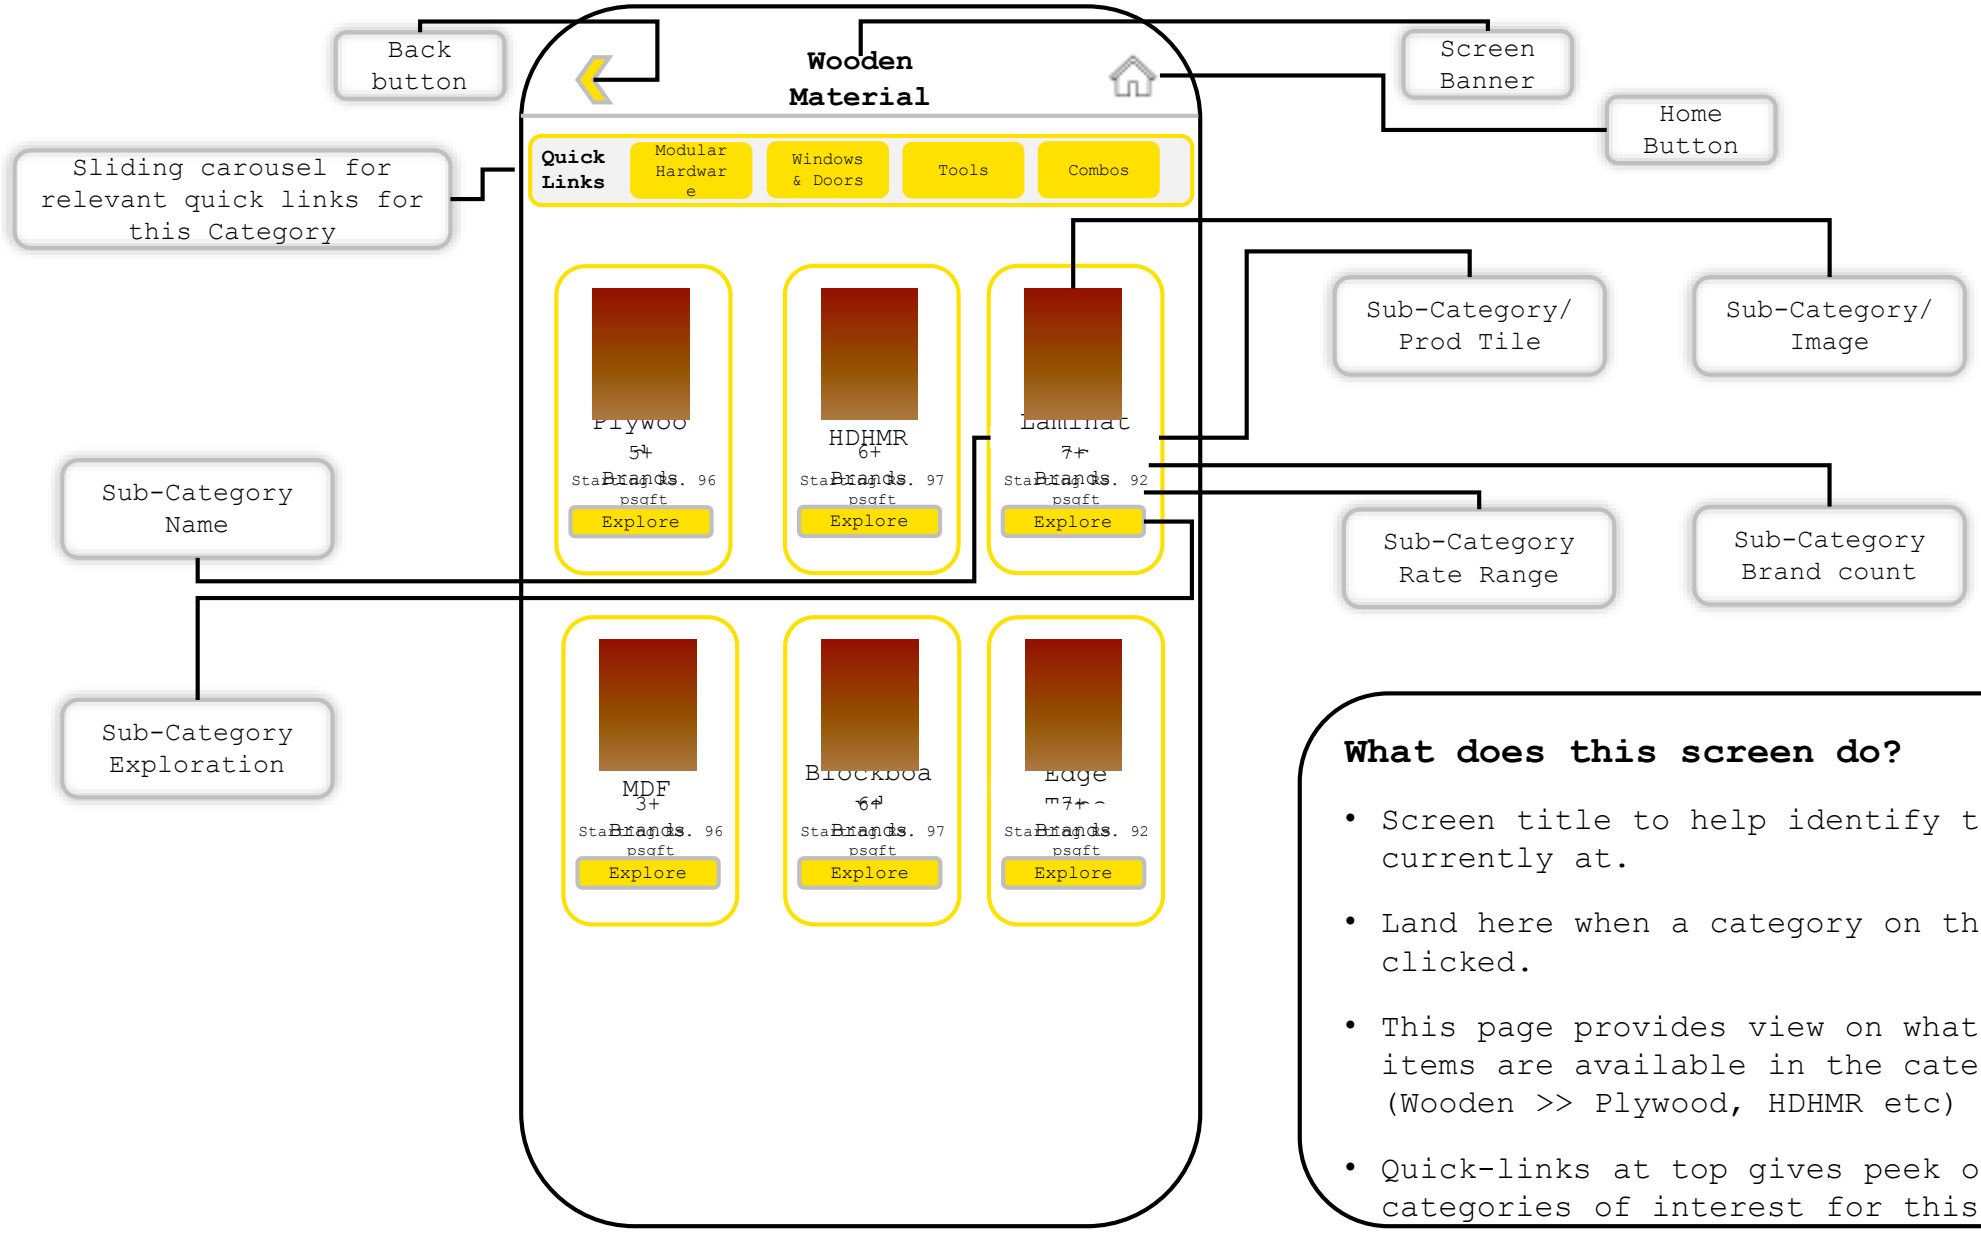
Requirement	Acceptance Criteria
Customer can type in product name in the **search bar.**	• **Same as search criteria listed earlier**
Customer can type in multiple orders separated by commas	Customers can type multiple product orders in a single input field, separated by commas. The system should correctly parse each order and display them as separate line items in the cart. **Auto-suggestions** should work for each product typed, helping users select the correct items. The app should **validate product availability** before adding to the cart. Users should be able to **edit or remove** any individual order before checkout. If an item is not found, the system should prompt the user with **alternative suggestions.** The order input should be **responsive** and work across all mobile screen sizes
Search Bar for products to be searched using their Name, Brand, Product Code. The search shall accommodate misspellings (Hinge spelled as Hyng or Hing etc)	**Same as search criteria listed earlier**
Mic in the search bar to assist text to speech for running the search.	**Same as search criteria listed earlier**
Clickable dynamic product suggestions reflected in tile form suitably (3 X 2)	Dynamic product suggestions should be displayed in a **3x2 tile format.** The tiles should update **in real-time** based on user preferences, recent searches, and trending products. Each tile should display **product image, name, price, and availability.** Clicking a product tile should navigate to the **Product Detail Page.** If no suggestions are available, a **default set of best-selling products** should be shown.
	Dynamic product suggestions should be displayed in a **3x2 tile**

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Icon to upload attachment in pdf, jpeg, png format – to be validated at backend	To check if scan to read text feature be used to convert handwritten note to suggestion (for backend team to act)
Icon to scan their order – to be validated at backend	To check if scan to read text feature be used to convert handwritten note to suggestion (for backend team to act)
Icon to record their order – to be validated at backend (Mobile number is required to record)	Use voice to text, natural language processing to return search criteria as explained above.
	These icons are only visible for users, who have signed up and logged in their account.

Product Listing & Detail Screen

Sub Category Page



What does this screen do?

- Screen title to help identify the screen user is currently at.
- Land here when a category on the landing page is clicked.
- This page provides view on what all sub-category items are available in the category selected (Wooden >> Plywood, HDHMR etc)
- Quick-links at top gives peek on other items/ categories of interest for this

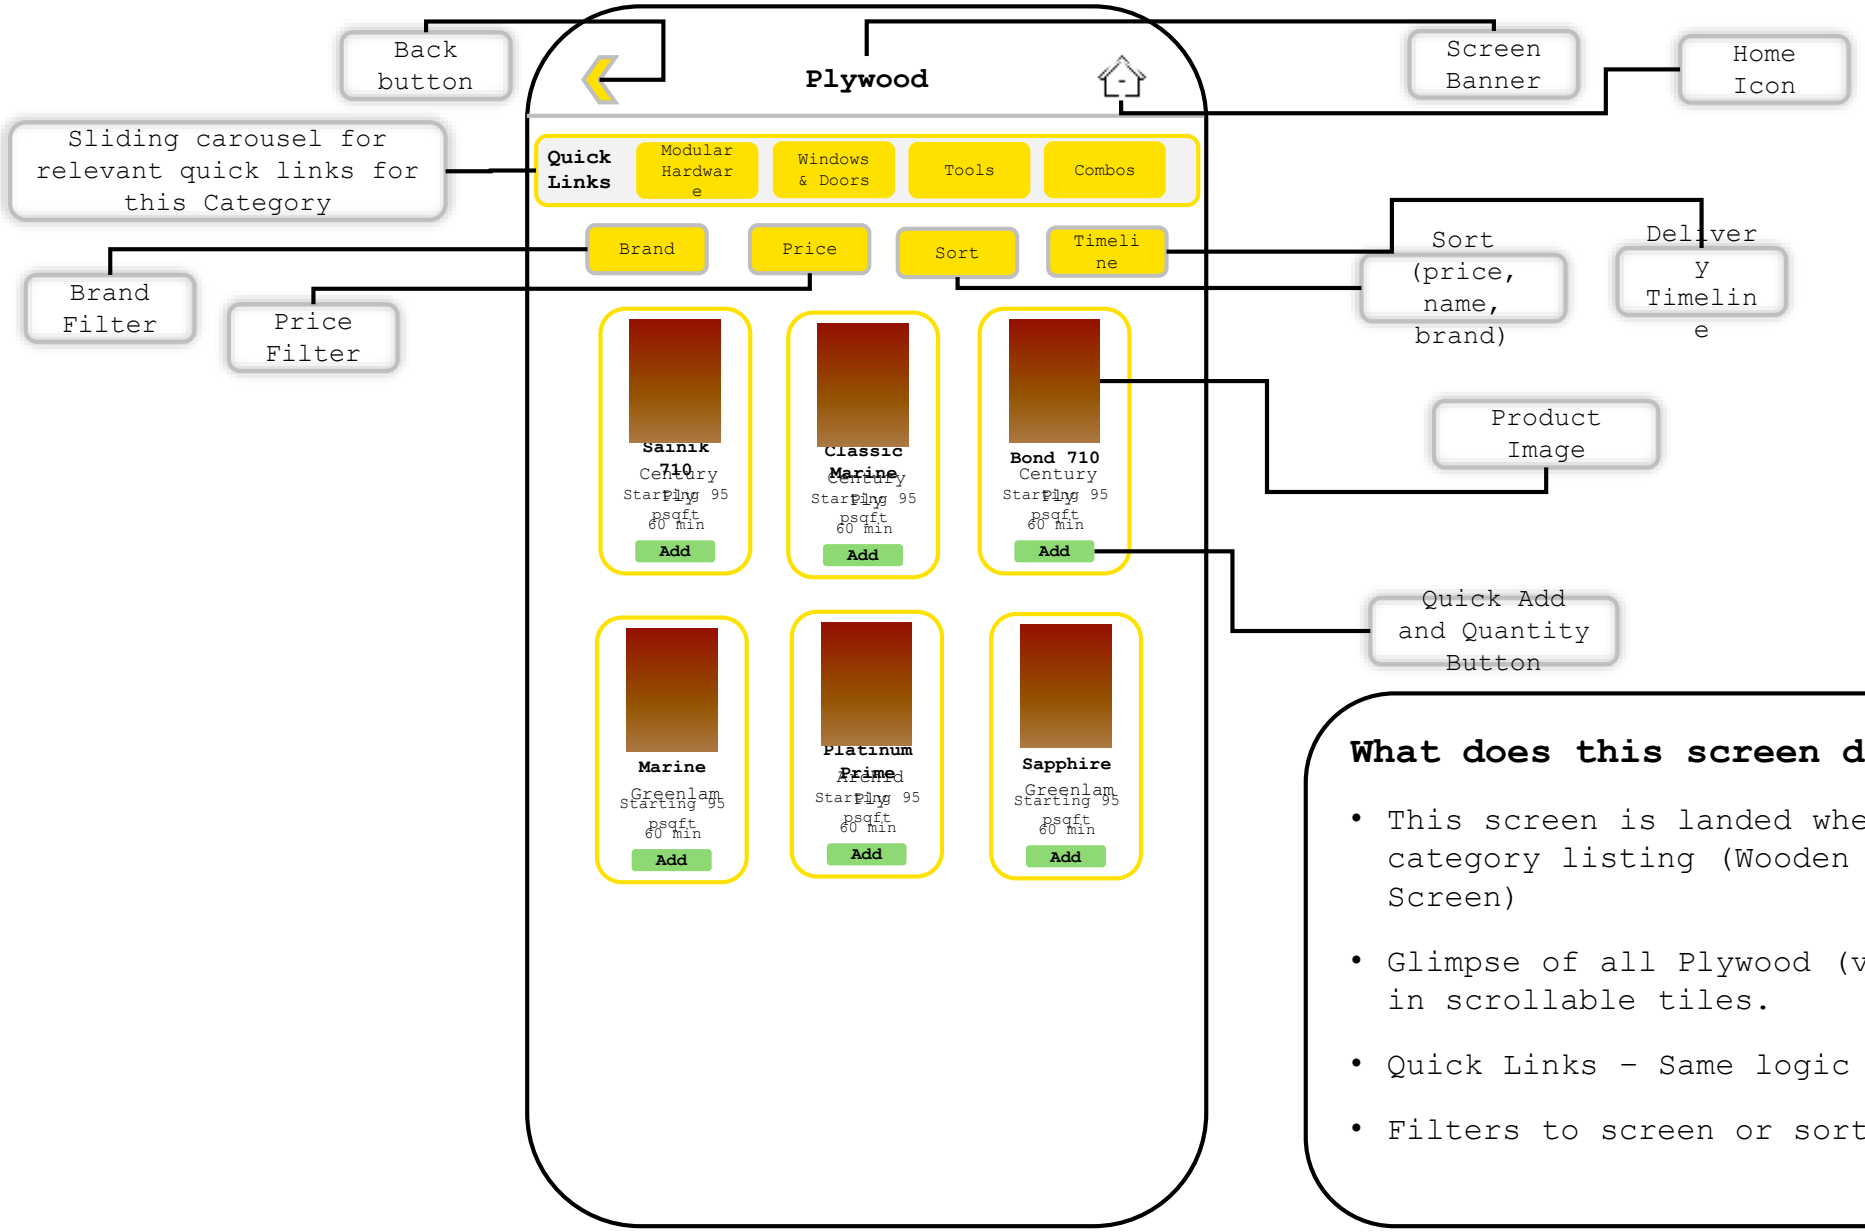
Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
A screen banner at top to signify the screen the user is currently at.	The screen banner should display the **screen name clearly** at the top. Clicking the **Back Button** should be present, allowing users to navigate **one screen back.** Clicking the **Home Button** should be available, instantly returning users to the **Landing Page.**
Icons to go back 1 screen or return to landing page (through home icon)	
Quick link bar to show other products/ sub-categories relevant to this screen.	Quick Link Icons should be displayed for **product categories/ subcategories** relevant to the current screen. Clicking a **Quick Link Icon** should navigate the user to the **respective category/ subcategory screen.** Icons should be visually distinct and easily tappable. If, the count of icons is more, the bar shall be scrollable (horizontally)

Product type icons that feature under this sub-category, shown in 3 X ____ tiled manner	Each Product Type Tile should include:
	• **Product Type Image**
	• **Product Name**
	• **Count of Available Brands**
	• **Starting Price (e.g., 'From ₹100 per sq. ft.')**
	  • Tiles should be **uniform in size** and adapt to different screen sizes.
	  • Clicking a **Product Type Tile** should navigate the user to the **Product Type Screen.**
	  • If a **product type has no available brands**, display an appropriate **message or alternative suggestions.**

Each icon is clickable and shall open the product listing in that product type	
Product type icon shall have – Product Type's image, name, count of brands, starting rate (take from the database)	

Product Listing Page



What does this screen do?

- This screen is landed when the user clicks the sub category listing (Wooden Material >> Plywood >> Screen)
- Glimpse of all Plywood (various plywood products) in scrollable tiles.
- Quick Links – Same logic as Sub Category page
- Filters to screen or sort the list.

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
A screen banner at top to signify the screen the user is currently at.	The screen banner should display the **screen name clearly** at the top. Clicking the **Back Button** should be present, allowing users to navigate **one screen back.** Clicking the **Home Button** should be available, instantly returning users to the **Landing Page.**
Icons to go back 1 screen or return to landing page (through home icon)	
Quick link bar to show other products/ sub-categories relevant to this screen.	Quick Link Icons should be displayed for **product categories/ subcategories** relevant to the current screen. Clicking a **Quick Link Icon** should navigate the user to the **respective category/ subcategory screen.** Icons should be visually distinct and easily tappable. If, the count of icons is more, the bar shall be scrollable (horizontally)

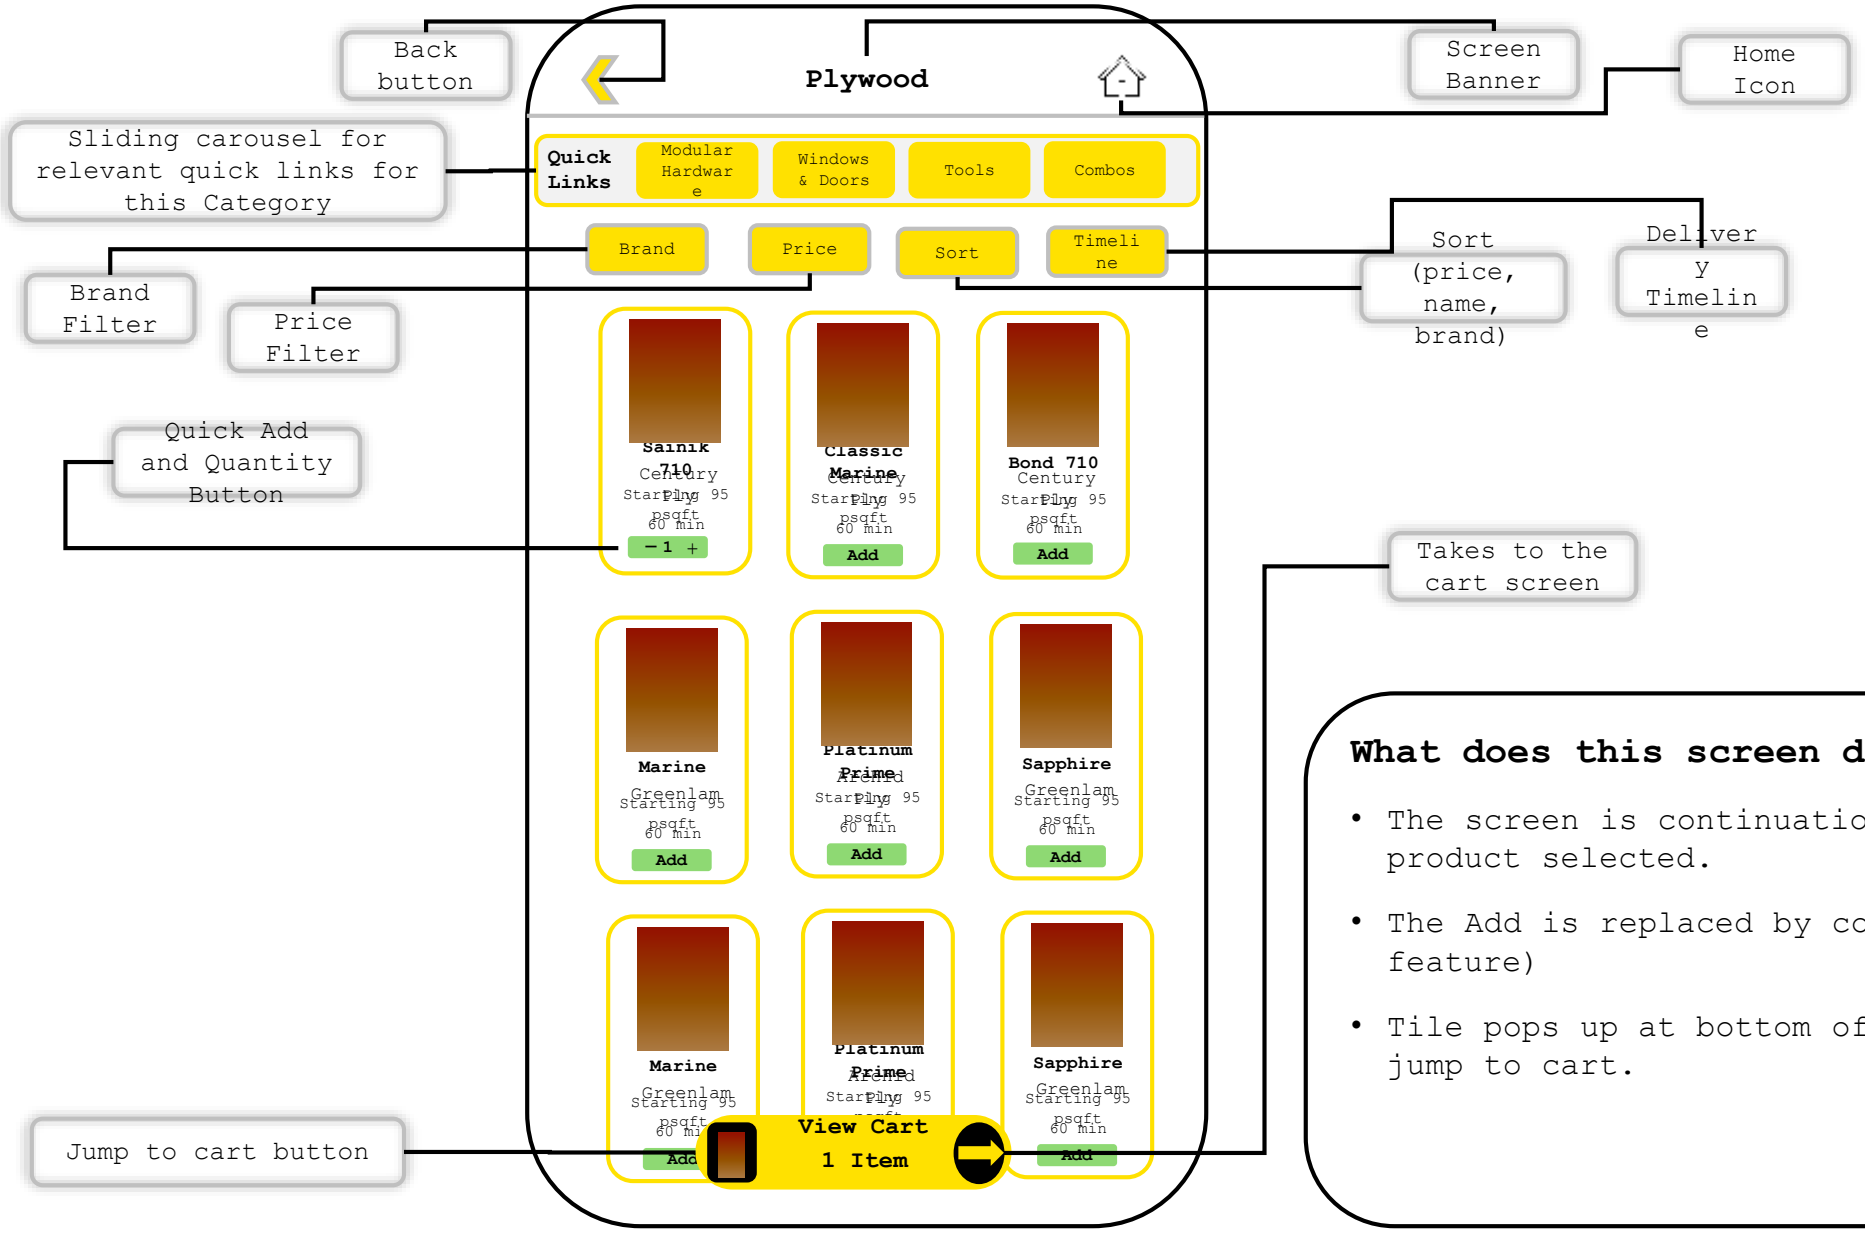
Product icons that feature under this Product Type, shown in 3 X ____ tiled manner	Each Product Tile should include:
	• **Product Image**
	• **Product Name**
	• **Brand Name**
	• **Starting Price (e.g., 'From ₹100 per sq. ft.')**
	  • Tiles should be **uniform in size** and adapt to different screen sizes.
	  • Clicking a **Product Tile** should navigate the user to the **Product Description Screen.**

Each icon is clickable and shall open the product listing in that product type	
Product type icon shall have – Product Type's image, name, count of brands, starting rate (take from the database)	
In the product icon, have a bar to add the item to cart, change quantity (through + or – button)	Detailed in subsequent page

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Horizontal Filters to select from various elements, like Brand, Price, Delivery Timeline and Sort (Name wise, Brand wise, price wise etc)	The filter section should be **horizontally scrollable** and include dynamic dropdowns for: • **Brand** (Multi-select for filtering products by available brands) • **Price** (Automatically categorized into 3 ranges (from data) – **Top 10% , Bottom 10%, Everything Else** • **Delivery Timeline** (Options: "Same Day," "Next Day," "Within 3 Days") • **Sort** (Options: Alphabetical (A-Z, Z-A), Brand-wise, Price (Low-High, High-Low)) • Users should be able to **combine multiple filters** (e.g., Brand + Price + Delivery Timeline). • The **Sort option should adjust dynamically** based on applied filters.
	• Sorting should work across **all displayed products** and update the list in real-time. • Price buckets should be **recalculated** if the user changes filters that affect price distribution.
	• The filter section should be **fixed at the top** of the Product Listing Page. • Dropdowns should be **clearly labeled** and expand smoothly when tapped. • Applied filters should be **highlighted for easy identification**. • Filters should be applied within **2 seconds** for a seamless experience

Product Listing Page



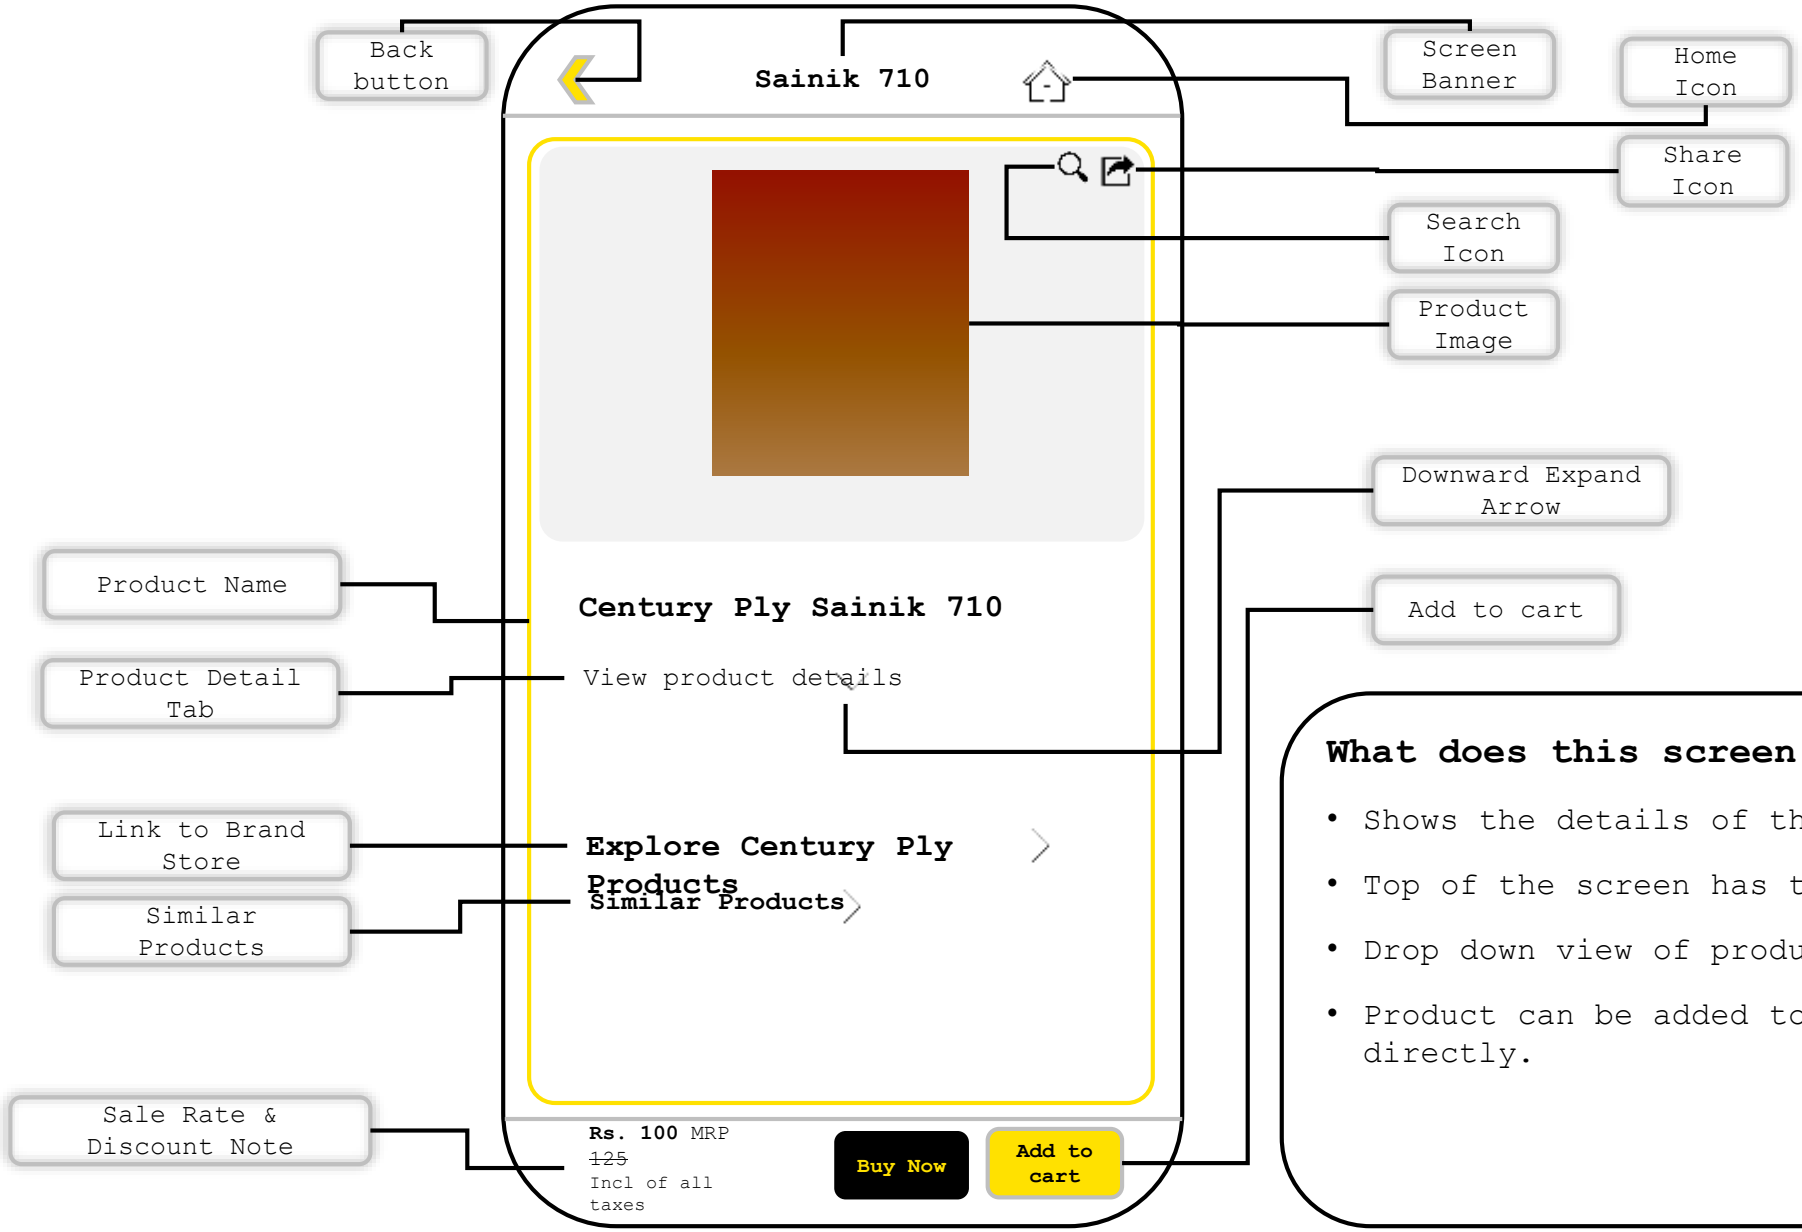
What does this screen do?

- The screen is continuation of listing page with product selected.
- The Add is replaced by counter (with add and remove feature)
- Tile pops up at bottom of screen with option to jump to cart.

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
A screen banner at top to signify the screen the user is currently at.	Same as product listing page
Icons to go back 1 screen or return to landing page (through home icon)	
Quick link bar to show other products/ sub-categories relevant to this screen.	
Product icons that feature under this Product Type, shown in 3 X ____ tiled manner	
Each icon is clickable and shall open the product listing in that product type	
Product type icon shall have – Product Type's image, name, count of brands, starting rate (take from the database)	
Horizontal Filters to select from various elements, like Brand, Price, Delivery Timeline and Sort (Name wise, Brand wise, price wise etc)	
In the product icon, have a bar to add the item to cart, change quantity (through + or – button)	• Each product icon should have a **clearly visible "Add to Cart" button**, which changes to a **+/- quantity selector** once clicked. • Clicking **"+" increases** quantity by 1, while clicking **"-" decreases** it (removing the item if it reaches 0). • The **cart icon in the footer updates in real-time** as items are added or removed. • If stock is limited, the **"+" button is disabled** when the max available quantity is reached. • All actions (Add, Increase, Decrease) should be **instant (within 1 second)** and sync across the product listing and cart page.
	• The **Cart Button** should appear **only when at least one product** has been added to the cart. • The button should remain **active and visible** as long as the cart contains **at least one item**.

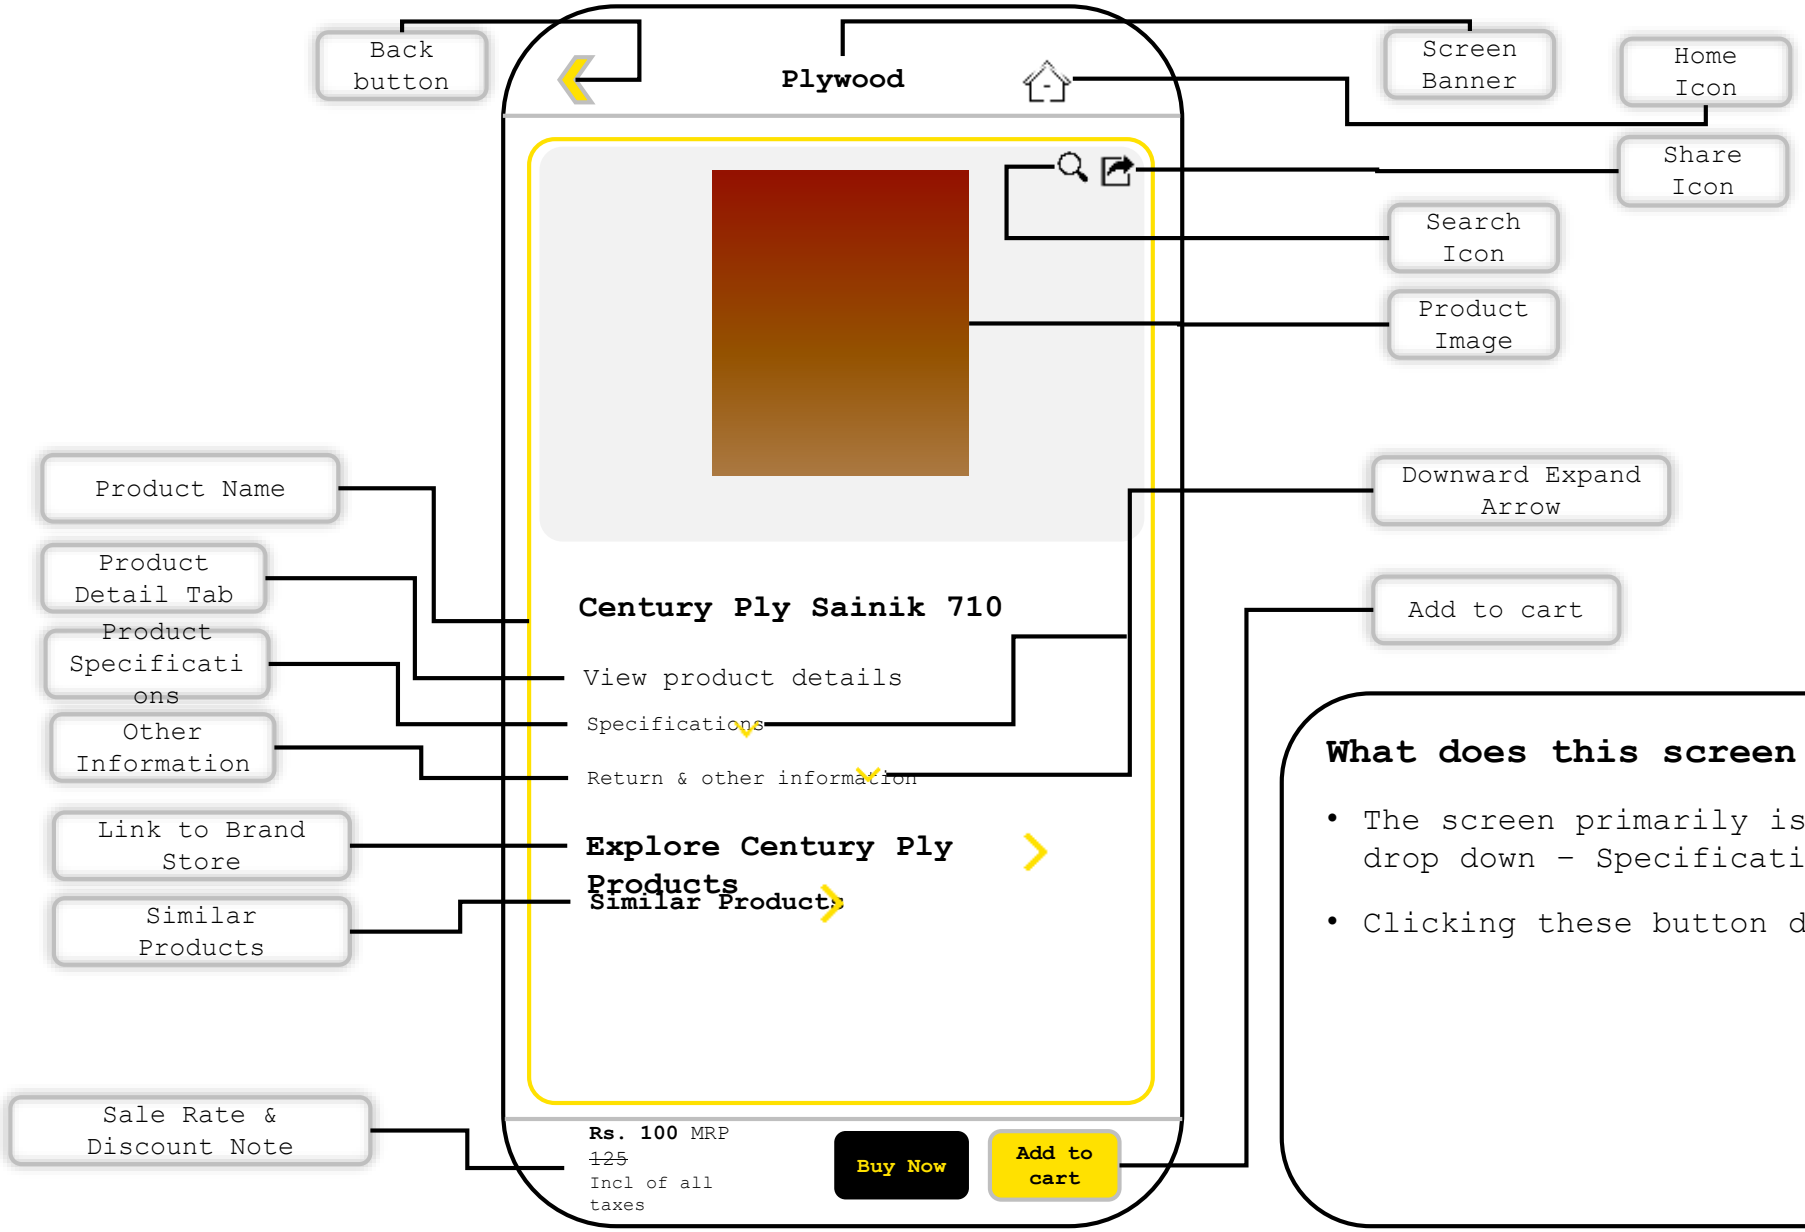
Product Detail Page



What does this screen do?

- Shows the details of the product.
- Top of the screen has the product name
- Drop down view of product details.
- Product can be added to cart or bought from here directly.

Product Detail Page



What does this screen do?

- The screen primarily is to view product details drop down - Specification and Return & other info.
- Clicking these button drops down the required info.

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
A screen banner at top to signify the screen the user is currently at.	As explained earlier
Icons to go back 1 screen or return to landing page (through home icon)	
Quick link bar to show other products/ sub-categories relevant to this screen.	
Product Images shall be visible (with horizontal scroll)	**Product Images** are displayed in a **horizontally scrollable** format, sourced from the image database and tiled properly. **Product images** should be **high-quality**, **properly sized**, and **horizontally scrollable** with smooth transitions.
Just along the Product Image tile, there shall be option to share the product (through share feature)	The **Share Button** must be clearly visible and functional, allowing users to share via **native device sharing options**. The **Share Button** should be easily accessible and non-intrusive to the product image view
Under the Product Image Tile, there shall be the Product Name in format Brand Product Name	The **Product Name ("Brand Product Name")** should be **clearly visible**, using a readable font and proper contrast.
Under the Product Name, there shall be dropdown bar containing Product Details that expands vertically	The **Product Details Dropdown** should expand and collapse smoothly, displaying complete specifications. The **Product Details Dropdown** should expand smoothly **without lag or abrupt jumps**.
Brand Button, just under the product details that takes user to the Brand Screen	Buttons for **Brand and Similar Products** should be easily tappable and well-spaced to prevent accidental clicks The **Brand Button** must navigate the user to the **Brand Screen** when clicked.
Button to direct user to similar products (same product type)	The **Similar Products Button** must redirect users to a **listing of the same product type**.
Footer in this screen shows the Sale Rate (MRP Strikeout) and	The **Sale Price and MRP (strikeout)** should be displayed accurately. The **"Add to Cart" button** should function properly, adding the

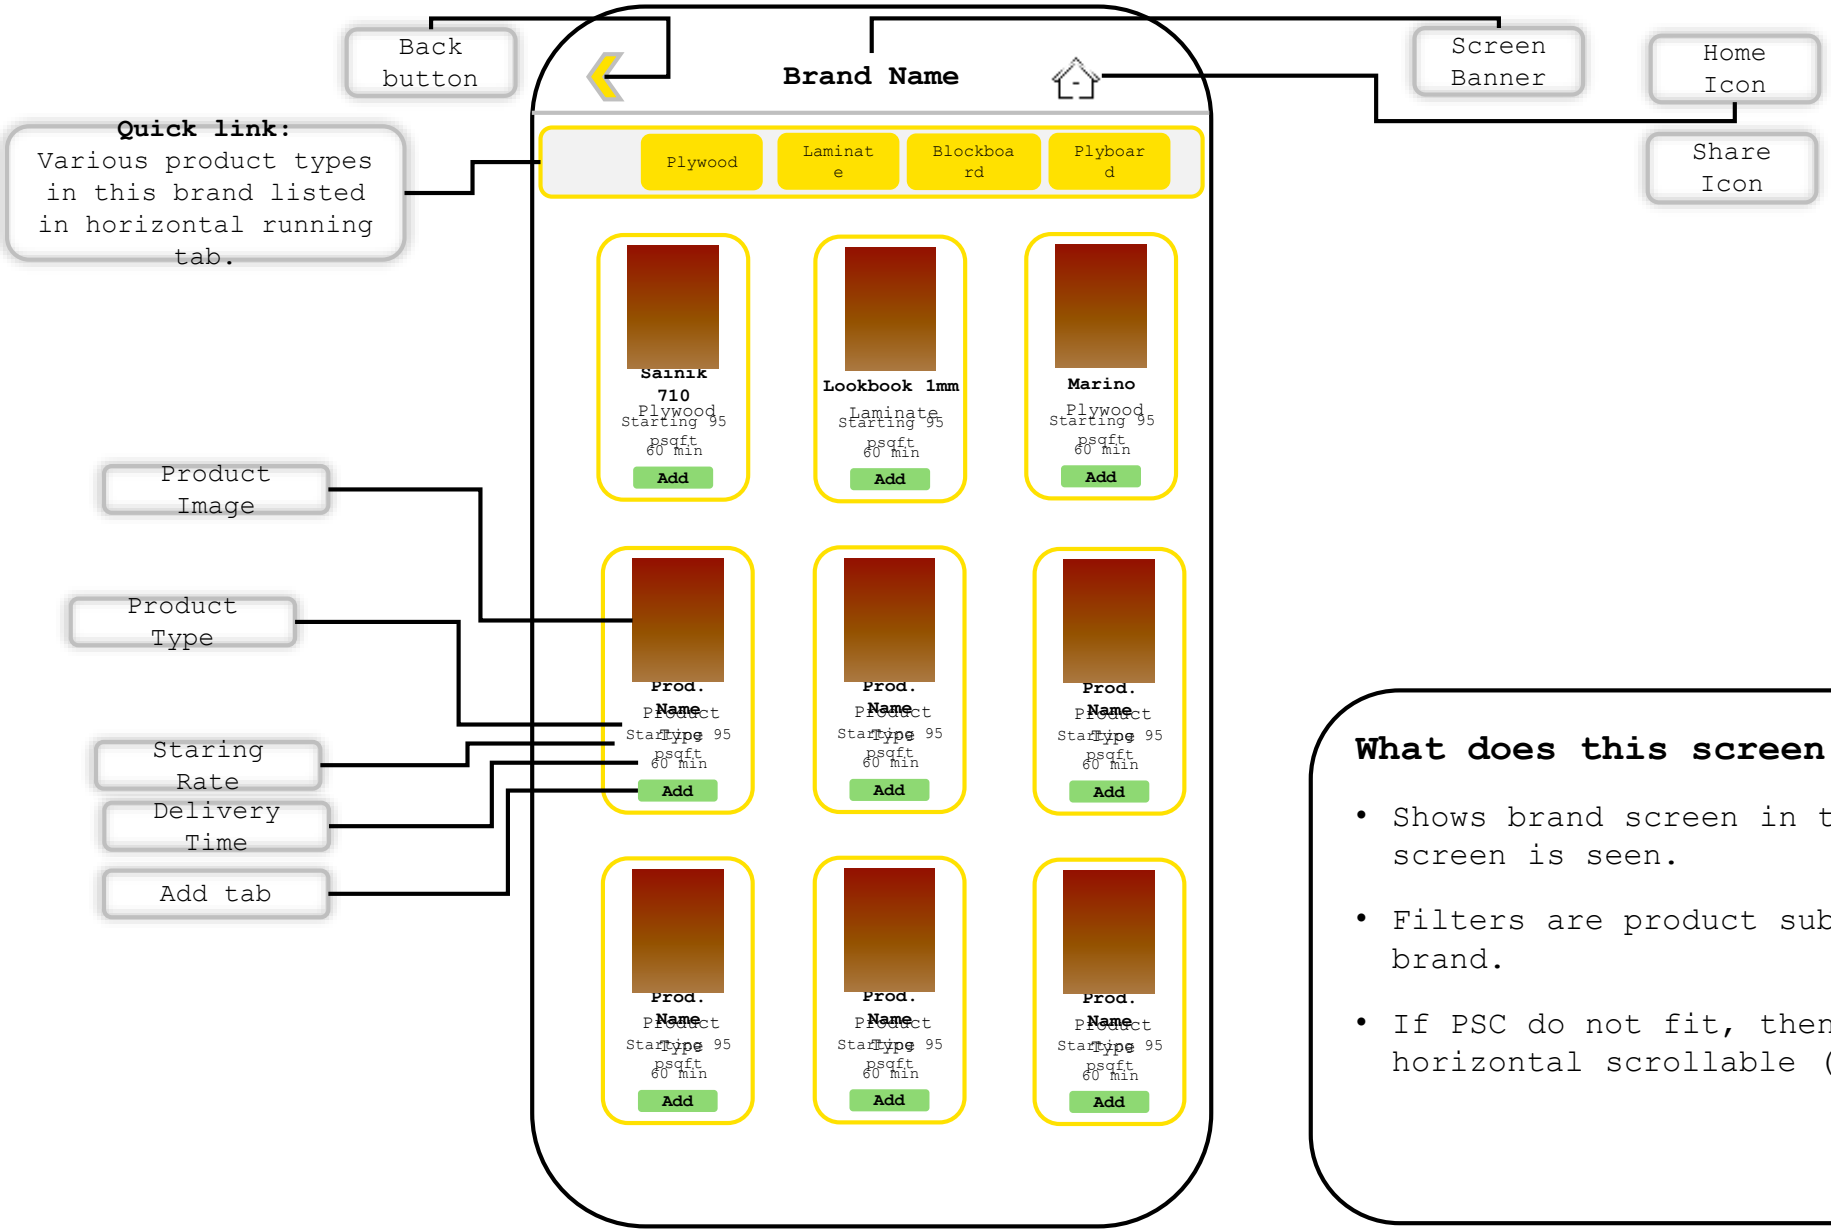
Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Responsiveness of screen	• The page should load **within 2 seconds**, including images and product details. • Navigation to **Brand Screen and Similar Products** should be **instant**, without freezing or lag. • The **Footer Pricing (Sale Price & MRP Strikeout)** should be easily readable and formatted consistently. • The **"Add to Cart" button** should be prominent, easy to tap, and should provide instant feedback when pressed.

Clicking on View Product Details, shall open dropdowns – Specifications, Return and other information	Clicking **"View Product Details"** expands dropdown sections:
	• **Specifications** → Displays product specifications (e.g., material, size, weight, brand).
	• **Return & Other Information** → Displays **return rules, care instructions, and manufacturer details.**
	  • Dropdowns should be **collapsible**, meaning only one section opens at a time.
	  • **Dropdowns should expand/collapse smoothly** with an animation (not instant jump).
	  • Clicking **Return & Other Information** should pull **return policies, care instructions, and manufacturer details** from the backend
	  • If a section is already open, clicking it again should **collapse** it.
	Data should load **within 1-2 seconds** for a smooth experience

On clicking Specifications, product specification info shall open	
On clicking Return and other information, details around Return rules, general care instruction, Manufacturer info shall be visible	

Brand Shop Screen



What does this screen do?

- Shows brand screen in the form the product listing screen is seen.
- Filters are product sub-category (PSC) in this brand.
- If PSC do not fit, then the quick link shall be horizontal scrollable (L > R and R < L)

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Quick-Link Bar (Horizontally Scrollable)	• The Quick-Link Bar should be **smoothly scrollable** and responsive. • Each button should represent a **product type** for the brand. • Clicking a product type button should highlight the selection and **navigate to the relevant product type screen.** • Backend should fetch **filtered products dynamically** when a type is selected. • The transition should be instant (**within 2 seconds**).
Product Listing Based on User History or Most Ordered (Last 30 Days)	• The product list should display **user's most-viewed or purchased products** first. • If history is unavailable, the list should default to **most-ordered products for the brand in the last 30 days.** • Backend API should fetch **sorted product data dynamically.** • The list should update smoothly **without lag**, and images should load instantly.

Product Tile with Key Information	• Each product tile should display:
	  • **Product Image** (clear, high-resolution).
	  • **Product Name** (formatted as "Brand Product Name").
	  • **Product Type** (sub-category details).
	  • **Price** (Sale price with MRP strikeout).
	  • **Delivery Timeline** (estimated time in days).
	• UI should ensure **clear visibility and accessibility** of information on different screen sizes.

Clicking "Add to Cart"	• Clicking **"Add to Cart"** should instantly:
	  • Add the product to the **cart database.**
	  • Trigger a **real-time cart update API call.**
	  • Update the **cart icon in the footer** with new item count.
	• UI should show a **confirmation animation** (e.g., button color change, mini-cart update).
	• Cart updates should be **visible within 1 second.**
	• If the request fails, an **error message should be displayed.**

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Top Bar (Customer Name & Mobile Number)	• Displays **customer's name and mobile number** (as per user input). • Clearly visible **below the header**, allowing users to edit details.
Delivery Time & Shipment Details	• Shows **expected delivery times** for each product. If multiple slots exist, display separate bars. • Delivery bars should be **distinct and easy to read**, adjusting dynamically based on shipment groups.
Product List (Image, Name, Size, Count, Price, Add to Cart)	• Lists all cart products in a **horizontally scrollable format** with: - **Product Image - Product Name (Brand + Product Type) - Size & Quantity Selector (+/- buttons) - MRP (struck-through) & Sale Price - Delivery Timeline - Add to Cart Button** • **Quantity adjustments (+/-) should update price and total in real time.**
Suggested Products (User History & Similar Products)	• Two sections: **"Previously Ordered" & "Similar Products"**, displayed in **horizontally scrollable format.** • Visually distinct labels for better navigation.
Billing Details (Item Total + Delivery & Handling Charges)	• Clearly displays **item total, delivery charges, and handling fees.** • Uses readable fonts and a structured layout for clarity.
Total Savings Tile (MRP - Sale Price)	• Highlights the **total savings** for the order. • Uses **green or bold text** to emphasize discount benefits.
GSTIN Entry & Validation	• Users can **input GSTIN details**, and the system fetches business information automatically. • No Prompt if GSTIN is missing, and once added, it is stored as the default GST account. • Unless the user checks GST option out in billing, it is always captured.
Cancellation Policy Button	• Displays a **full-width button** (if applicable), expanding to show terms when clicked.
Order Delivery Address Tab	• Displays **delivery address** (if available). If no address is found, clicking takes the user to the **Add Address** screen. • If an address is added, the address bar **lifts up** with all saved addresses for selection.
Payment Options (Left Footer Bar)	• Clicking the **Payment Options button** takes users to **Select Payment Method.** • The **last-used payment method** is preselected by default.
	• Displays **final payable amount** and a **Place Order button.** Clicking it triggers **payment processing**

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Order Cart in Background (Hazed Out)	• The **order cart** should remain visible but **slightly blurred** in the background to maintain context. • Users should still be able to return to the cart if needed.
Tile to Select Address	• A tile should display two options: **"Add New Address"** and **"Select Existing Address"**. • Each option should be **clearly separated and labeled** for easy selection.

Add New Address Button	• Clicking **"Add New Address"** triggers a **pop-up with two options:**
	  • **"User is at the location"** → Uses **GPS-based geo-location** for address selection.
	  • **"User is far away"** → Redirects to a **manual address search.**
	• The transition should be **smooth and instant (within 2 seconds).**
	• The **pop-up should close automatically** once an option is selected.
	• Users should be able to **dismiss the pop-up** if they change their mind.

Select from Existing Addresses	• Displays a list of previously saved addresses. • Each address should have a **radio button** for selection, ensuring only one can be active at a time. • The **selected address should be highlighted** visually for clarity.
Edit & Delete Address Options	• Each saved address should have **"Edit" and "Delete"** options clearly visible. • Clicking **"Edit"** should take users to the **Edit Address screen.** • Clicking **"Delete"** should trigger a **confirmation prompt** before removing the address. • If an address is deleted, the next available address should be **auto-selected.**
Navigation & Interaction	• Clicking **"Back"** should return users to the **Cart Screen.** • Clicking **"Continue"** (after selecting an address) should take them to the **Checkout screen.**
	• The screen should **load within 2 seconds.**

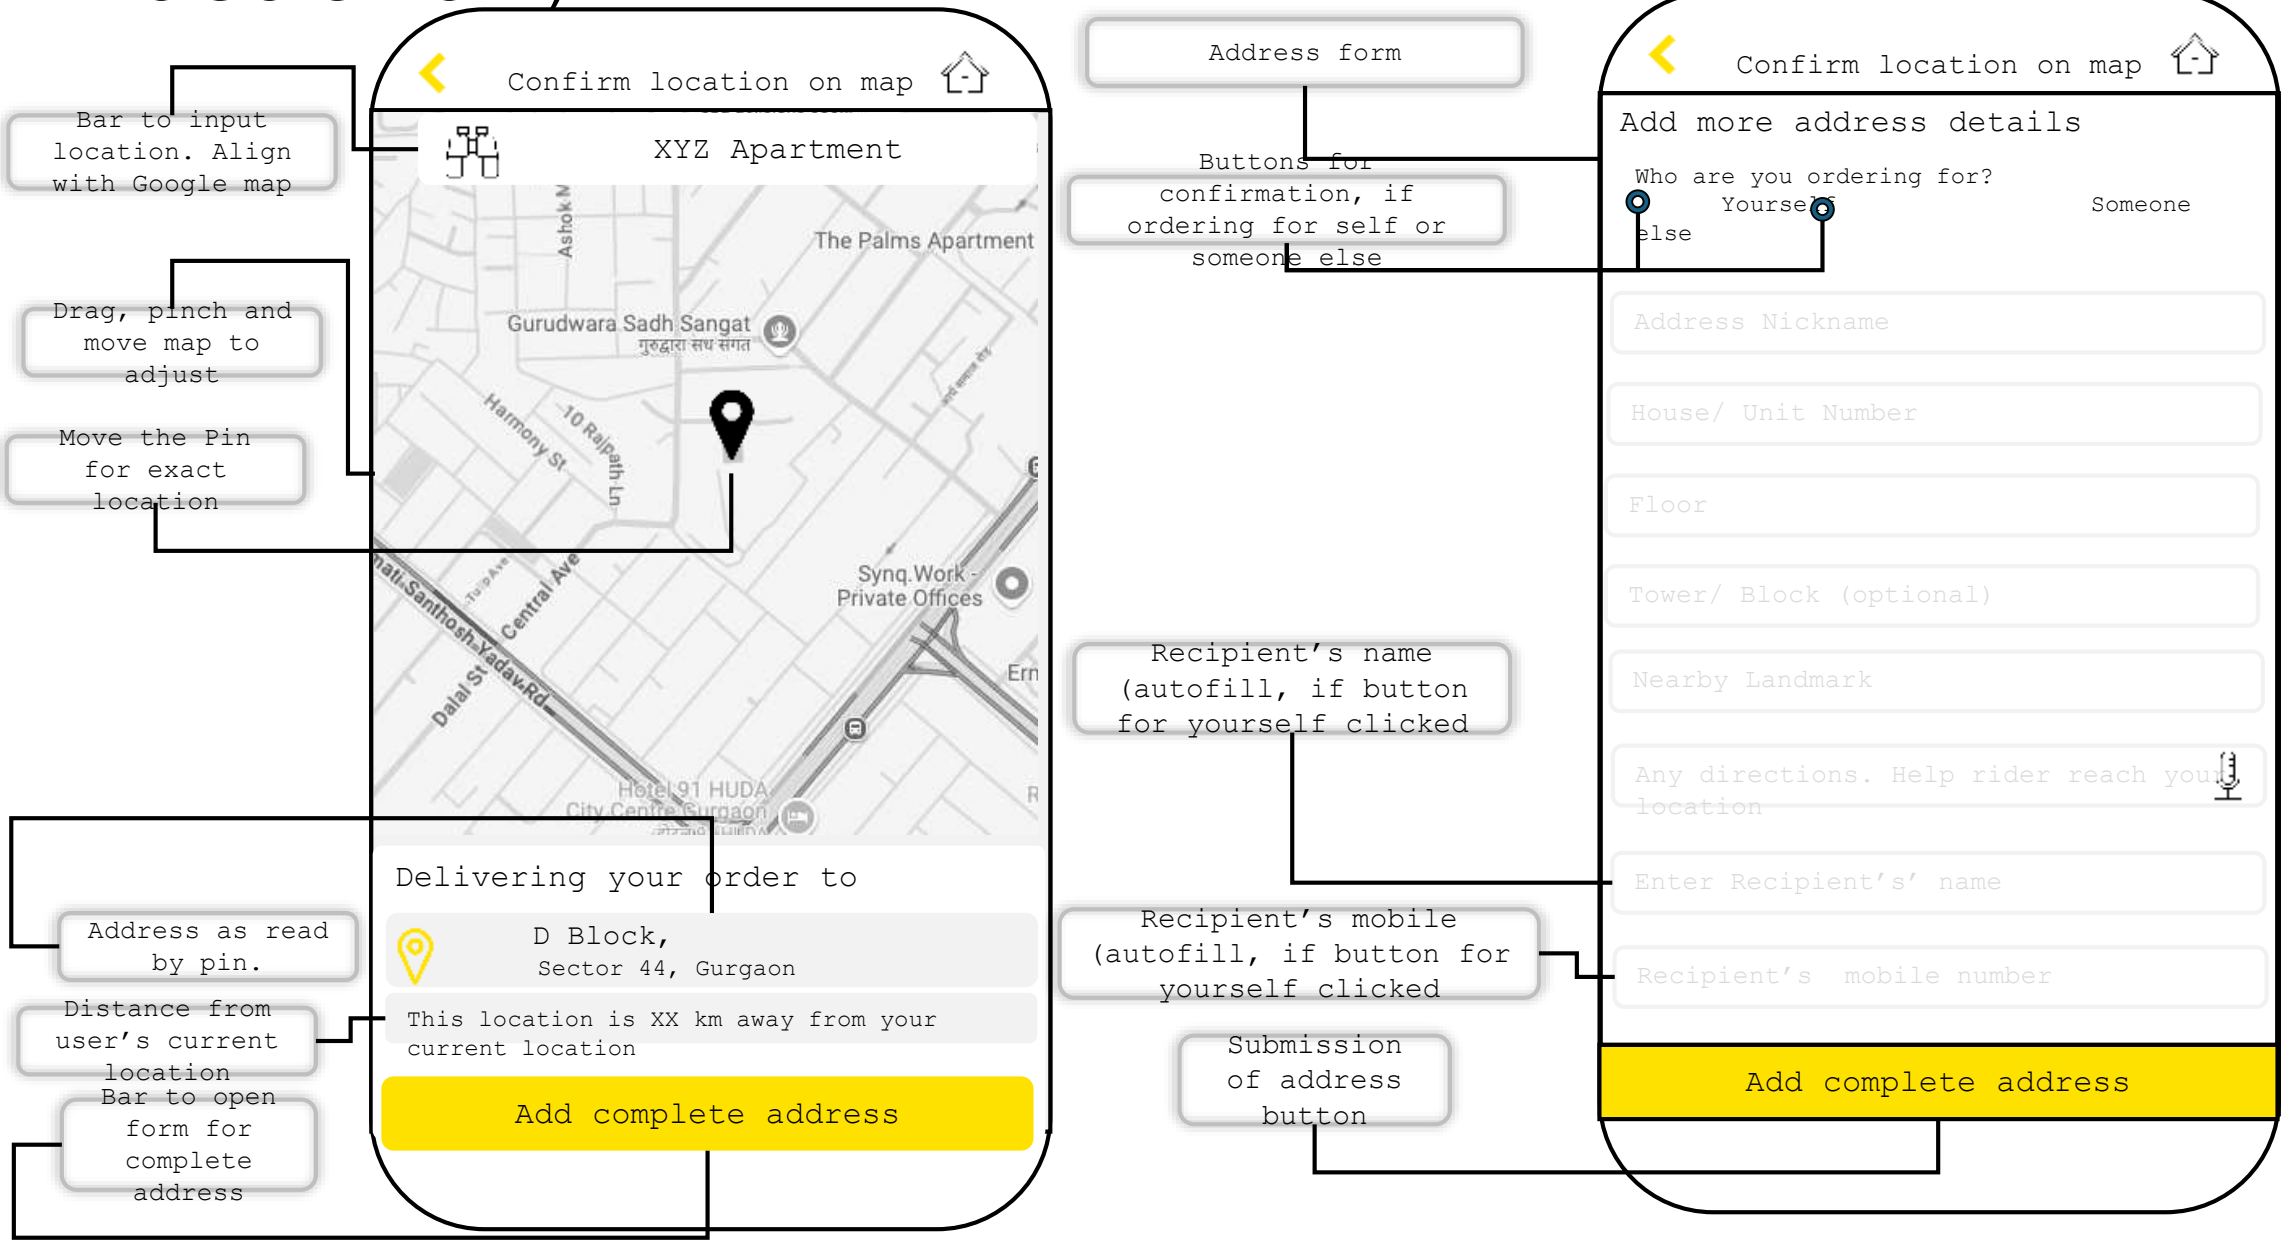
Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Search Tab with Binocular Icon	• A **search bar** with a **binocular icon** should be placed under the screen banner. • Users can **type the location manually** to search for an address. • Search results should display **Google Map suggestions** in a dropdown as the user types.
Google Map Display & Pin Placement	• Once the user selects or types a location, a **Google Map** should appear with a **pin on the suggested location**. • Users should be able to **pinch, zoom, and move the map,** adjusting the pin for precise placement. • The pin position should update the **address details in real-time.**
Real-Time Location Update	• A bar under the map should display the **identified location name** dynamically. • It should also **show the distance** between the user's live location and the pinned address. • Google Maps API should be used to **calculate and update this distance in real-time.**
Handling GPS Failure or Location Issues	• If the user’s **GPS is turned off or the location cannot be determined,** they are taken directly to the **Address Form screen.** • Upon submitting the manually entered address, a **red pop-up warning appears,** stating: **"Address entered manually. Please cross-check for accuracy.”** • Users can **proceed after acknowledging the warning** or go back to re-enter the address.
Activation of "Input Complete Address" Button	• The **"Input Complete Address"** button should remain **disabled** until a location is selected. • Once the location is finalized, the button should become **active and clickable.** • Clicking the button should **navigate the user to the Address Form screen.**

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Address Form Screen	• The screen should display a **form to input address details.** • Users must select whether they are ordering for **Self or Someone Else.**
Self vs. Someone Else Selection	• If **"Self"** is selected: - Name & Mobile Number should **auto-fill from the user profile.** • If **"Someone Else"** is selected: - The user must manually enter **Name & Mobile Number** (both fields are mandatory).
Direction Input (Text & Voice)	• Users should be able to add **directions** for delivery. • They can enter directions **by typing or using voice input** (via a mic button). • The **mic button** should allow speech-to-text conversion.
Saving Address to Address Book	• Once the address is added, it should be **saved to the app's Address Book.** • The saved address should be **available for future orders.** • Users should be able to **edit or delete** this address later.
Navigation & Flow	• Clicking **"Back"** should return the user to the **Address Selection Screen.** • Clicking **"Save & Continue"** should confirm the address and return to **Checkout.** • The flow should be **smooth, with no delays** between screens.
Performance & Responsiveness	• The screen should **load in under 2 seconds.** • All elements should be **responsive on mobile and tablet screens.** • Google Maps should function **without lag.**

Add new address screen (Step 2 – At location)



Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
GPS Pin on Current Location	• When the user selects **"I am at this location"**, a **Google Map** appears with a **pin automatically placed on the user's GPS-detected location.** • Users should be able to **pinch, zoom, and move the map,** adjusting the pin for precise placement.
Real-Time Location Update	• A bar under the map should display the **identified location name** dynamically. • It should also **show the distance** between the user's current GPS location and the pinned address. • Google Maps API should be used to **calculate and update this distance in real-time.**
Handling GPS Failure or Location Issues	• If the user's **GPS is turned off or the location cannot be determined,** they are taken directly to the **Address Form screen.** • Upon submitting the manually entered address, a **red pop-up warning appears,** stating: **"Address entered manually. Please cross-check for accuracy."** • Users can **proceed after acknowledging the warning** or go back to re-enter the address.
Activation of "Input Complete Address" Button	• The **"Input Complete Address"** button remains **disabled** until a location is confirmed. • Once the location is finalized, the button should become **active and clickable.** • Clicking the button should **navigate the user to the Address Form screen.**
Address Form Screen	• The screen should display a **form to input address details.** • Users must select whether they are ordering for **Self or Someone Else.**
Self vs. Someone Else Selection	• If **"Self"** is selected: - Name & Mobile Number should **auto-fill from the user profile.** • If **"Someone Else"** is selected: - The user must manually enter **Name & Mobile Number** (both fields are mandatory).

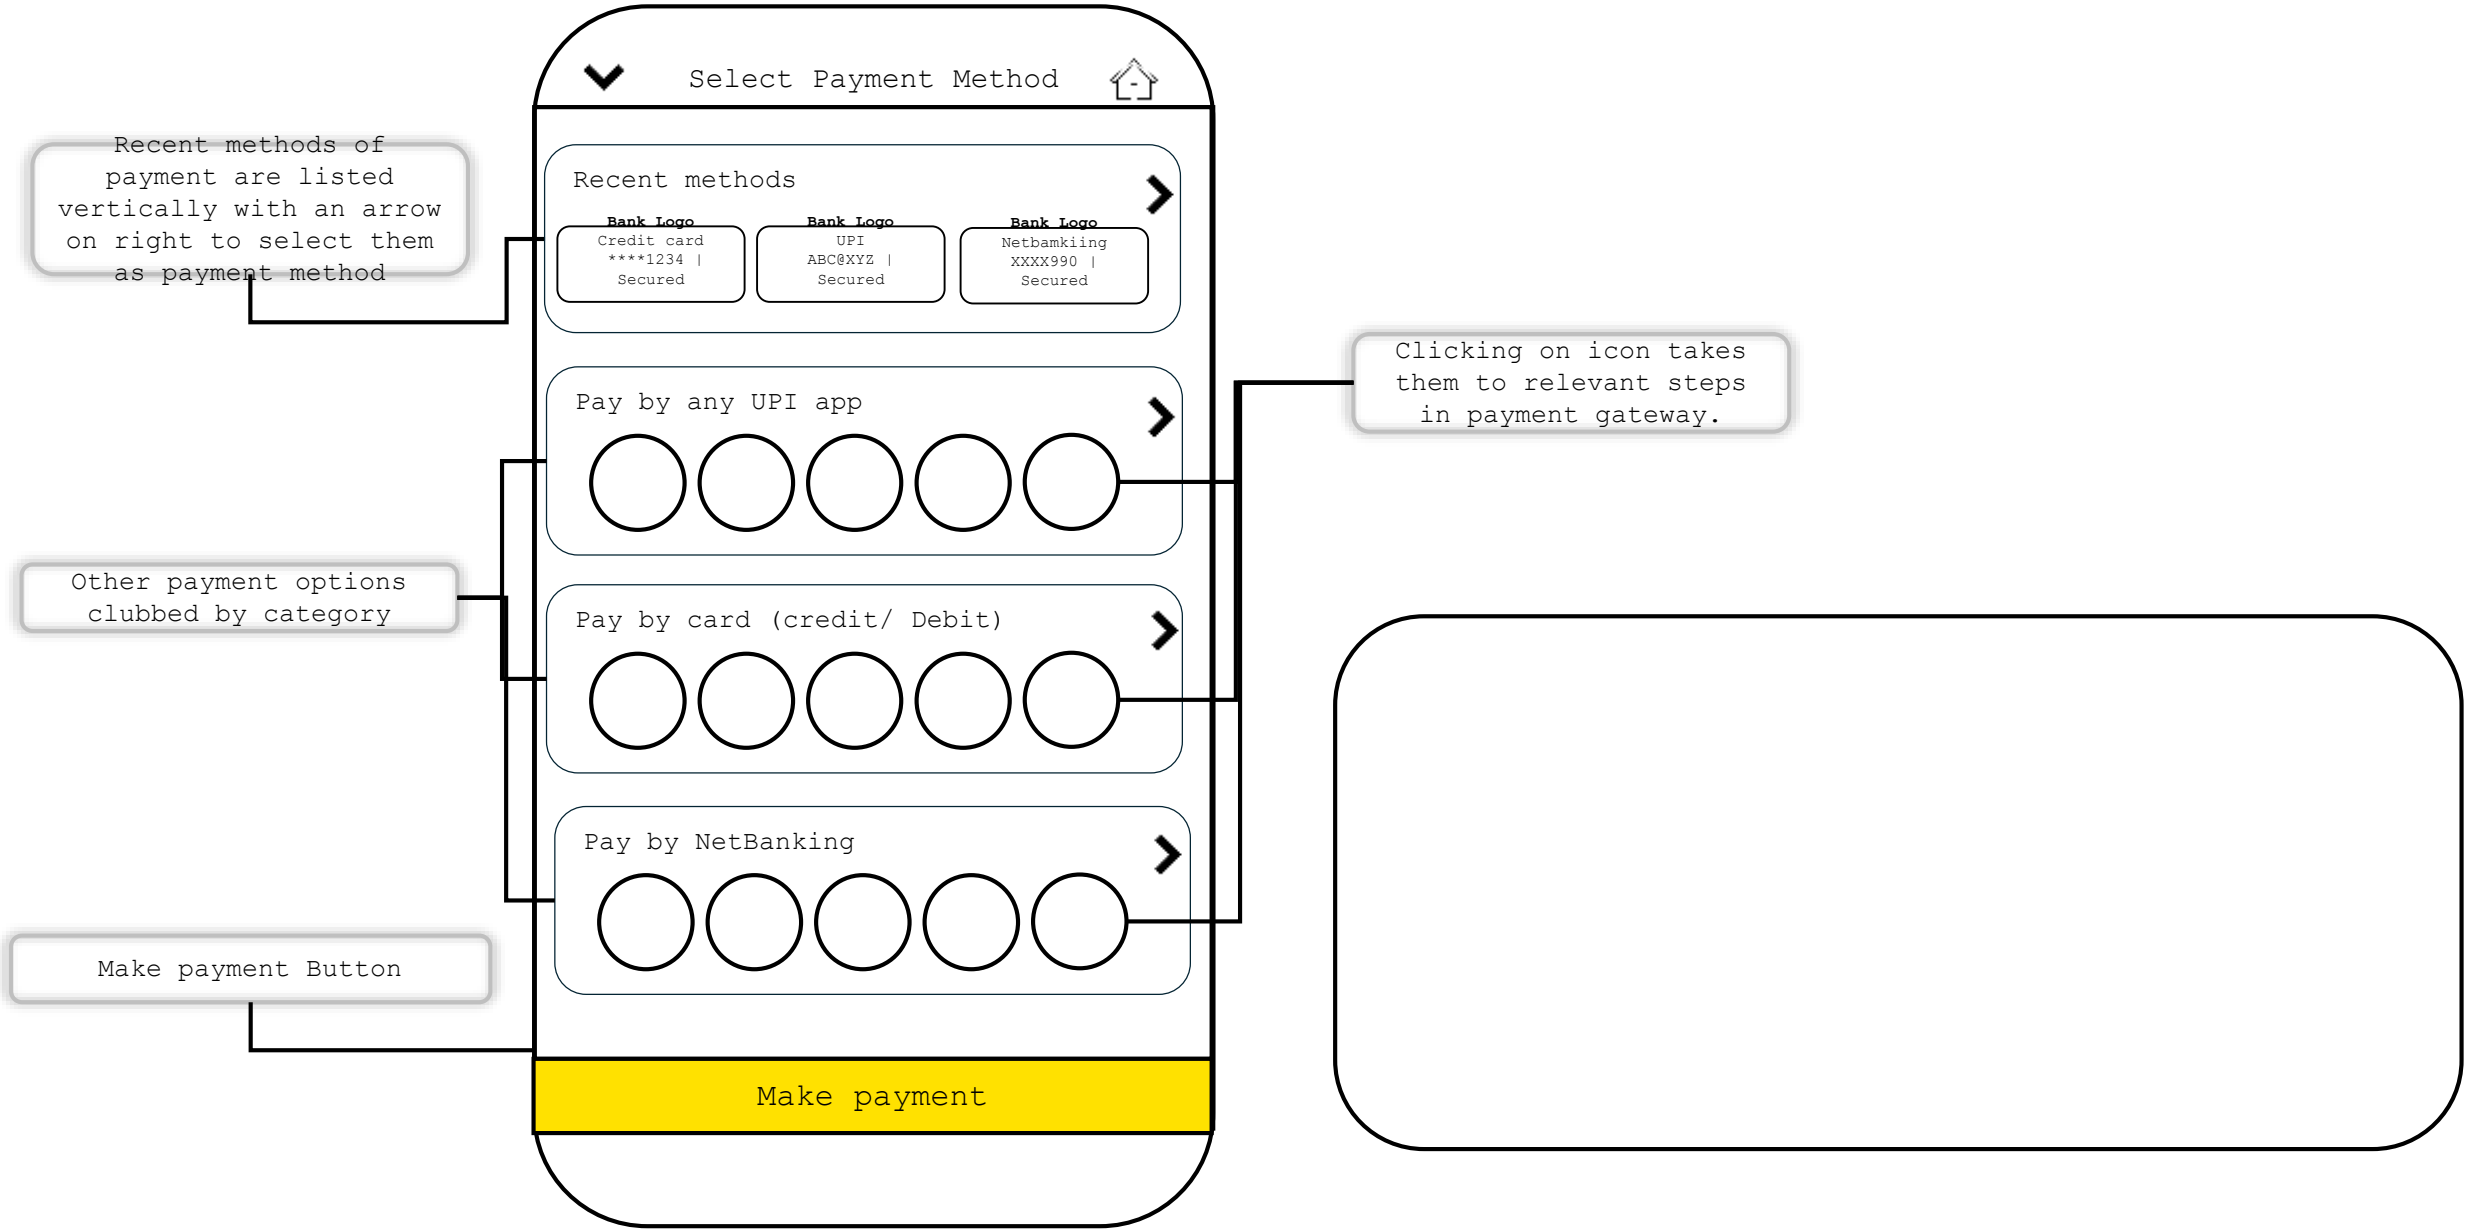
Saving Address to Address Book	• Once the address is added, it should be **saved to the app's Address Book.** • The saved address should be **available for future orders.** • Users should be able to **edit or delete** this address later.
Navigation & Flow	• Clicking **"Back"** should return the user to the **Address Selection Screen.** • Clicking **"Save & Continue"** should confirm the address and return to **Checkout.**

Checkout and payment



Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Recent Payment Methods Section	• **Under the screen banner**, the **last 3 used payment methods** should be displayed. • Each method should be represented by an **icon** (e.g., UPI, credit card, net banking). • A **right arrow (→) button** should allow users to explore **more payment options.**
Selecting a Recent Payment Method	• Clicking on any **recent payment method** should **highlight** the selection. • The **"Make Payment" button** at the bottom should become **active.** • Clicking "Make Payment" should **take the user directly to the payment gateway** for the selected method.
Exploring More Payment Methods	• If the user clicks the right arrow, they should be taken to a **Payment Selection screen.** • The screen should categorize payment methods into **tiles**, e.g.,: - **Credit/Debit Cards** (Visa, MasterCard, Rupay) - **UPI** (GPay, PhonePe, Paytm, BHIM) - **Net Banking** (ICICI, HDFC, SBI, Axis, etc.) - **Wallets** (Amazon Pay, Paytm Wallet, etc.) • Each **grouped tile** should show **bank icons** or **payment service logos.**
Selecting a New Payment Method	• Clicking on any **payment icon** should take the user to **the respective payment gateway page.** • The **payment gateway page** may be controlled by the **selected payment provider.**
Payment Completion & Confirmation	• Upon successful payment, the user should: - Receive a **WhatsApp & SMS confirmation** with order details. - See a **pop-up confirmation** on their screen. - Be redirected to the **Order Status screen.** • The pop-up should feature an **animated thumbs-up** to indicate success.
Handling Payment Failures	• If payment **fails**, an **error pop-up** should appear with: - Reason for failure (e.g., "Payment declined", "Insufficient funds"). - A **"Retry Payment"** button. - A **"Choose Another Method"** button.
Navigation & Flow	• The user should be able to **go back** from any stage **before payment completion.** • Upon successful payment, they should be taken to **Order Status**, not back to Checkout.
Performance & Responsiveness	• The Checkout & Payment screens should **load in under 2 seconds.** • All elements should be **responsive** across mobile and tablet screens.

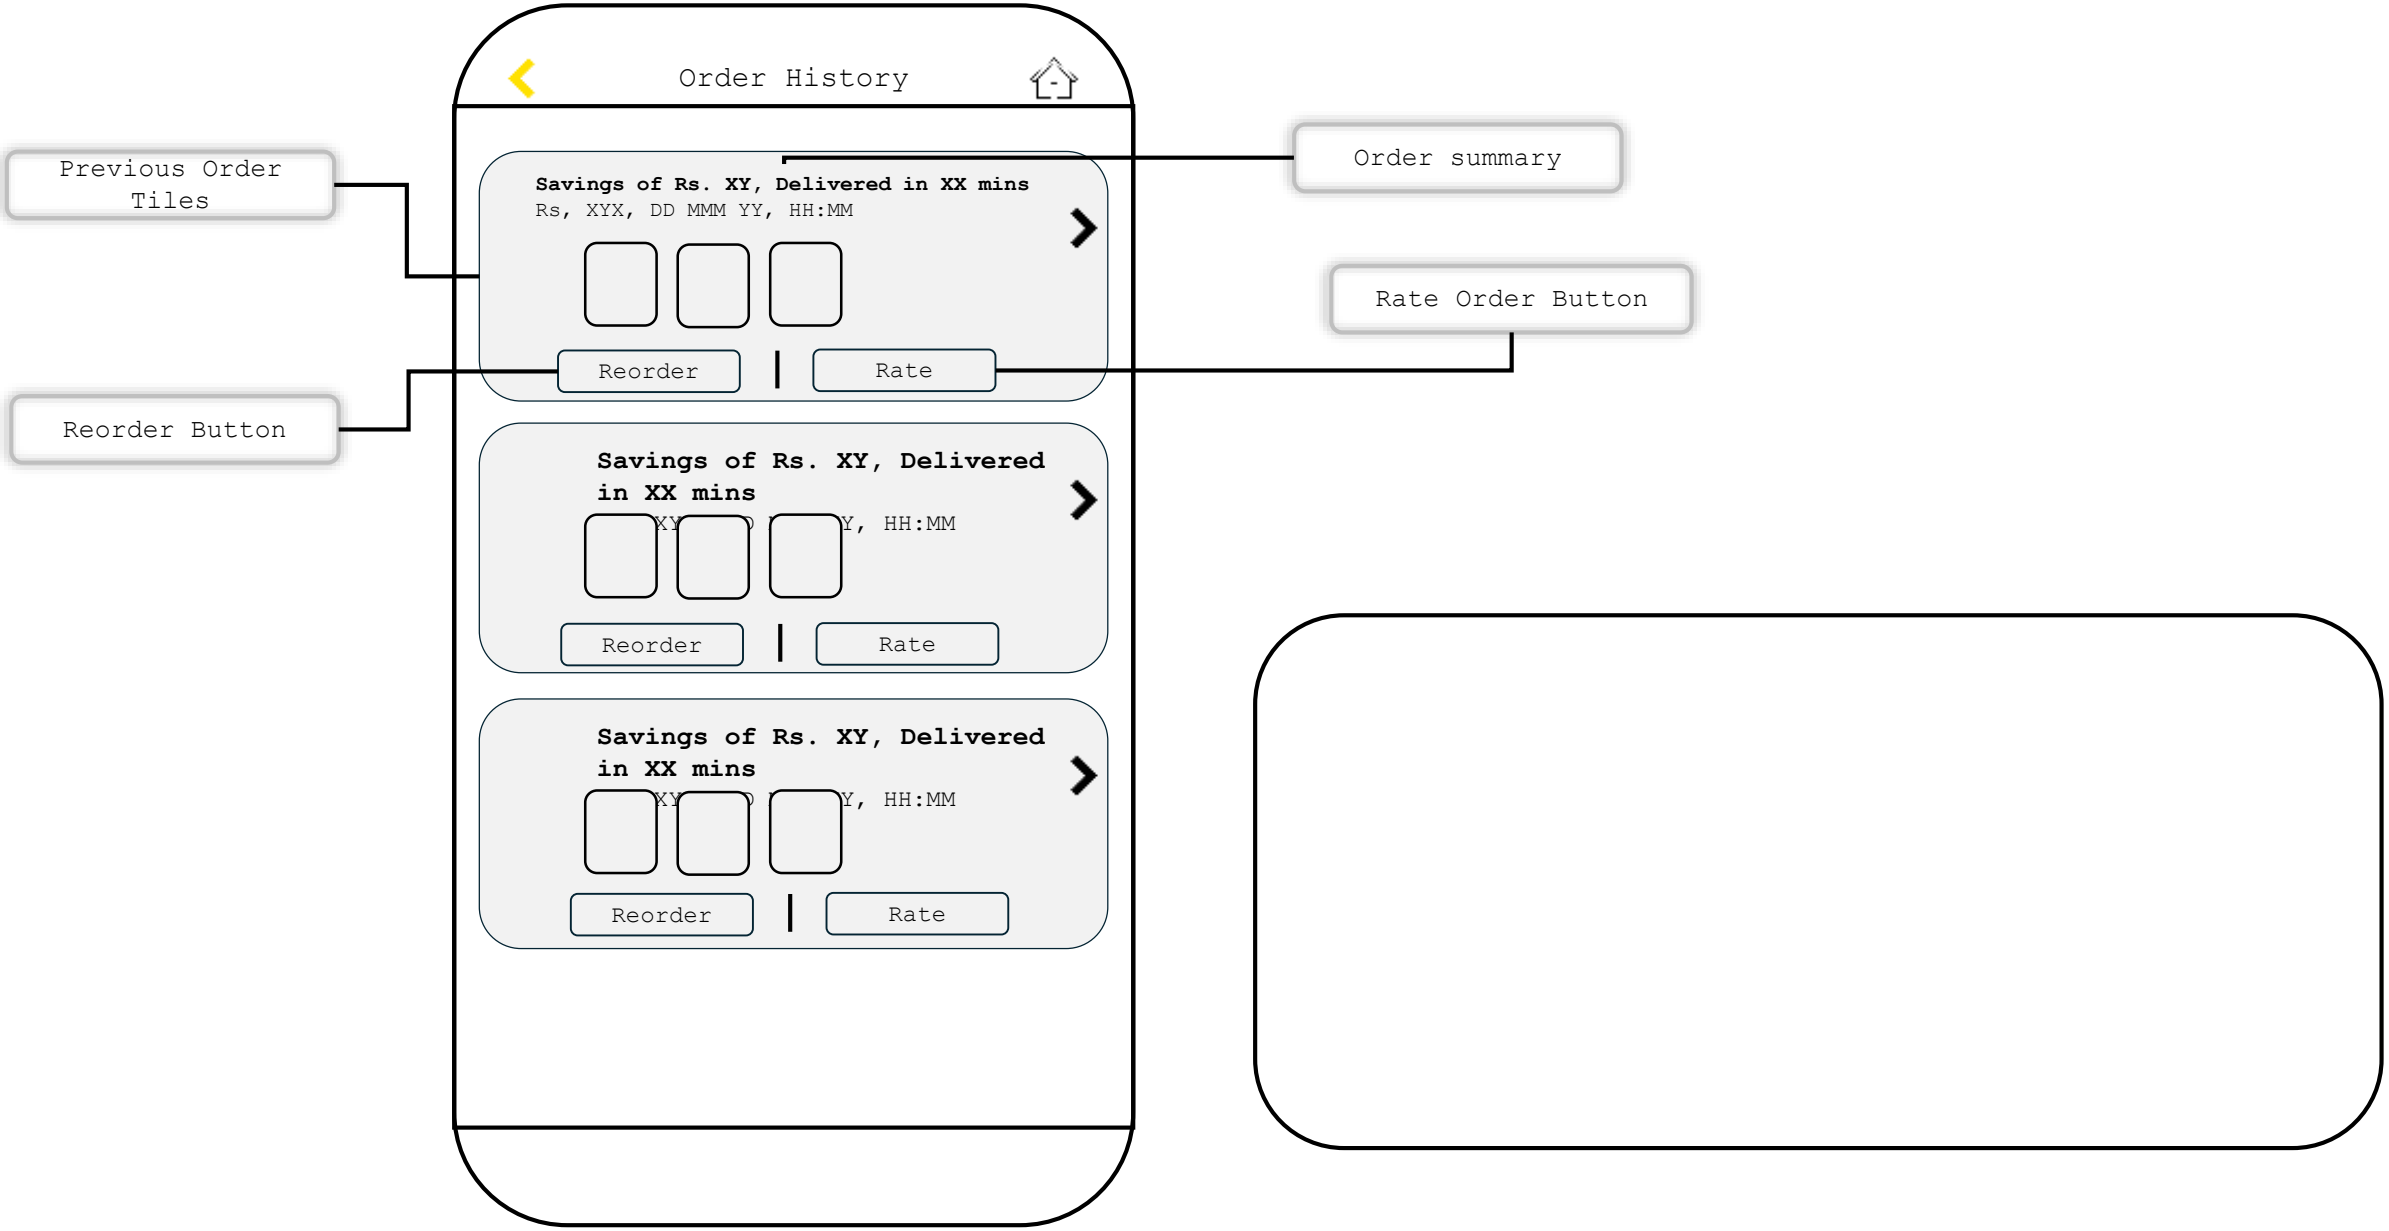
Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Order Status Display	• Under the screen banner, a **heart icon** ♥ and **current order status** should be displayed dynamically (e.g., **"Your Order is Confirmed"**, **"Out for Delivery"**, **"Delivered"**). • Status should update **based on backend updates.**
Order Summary Section	• Display a **tiled summary** showing: - **Product ordered** (Image & Name) - **Quantity** - **MRP** (strikethrough) - **Sale Price** (in bold) • Ensure the tiles are **visually clear and responsive.**
Action Buttons (Under Order Summary)	• Buttons for: **Track Order, Support, Rate & Review, FAQs.** • Clicking any button should **fade out the others** and transition smoothly to the selected action within **1-2 sec.**
Track Order	• Clicking **Track Order** should **fade out other buttons.** • A **progressive order status timeline** appears instantly (1 sec): - **Order Received at XX am/pm - Order Dispatched at XX am/pm - Order Delivered at XX am/pm** • These statuses are **updated manually in the backend,** but when clicked, all steps appear in a **progressive sequence.**
Support	• Clicking **Support** should take the user to the **Support Screen.**
Rate & Review Experience	• Clicking **Rate & Review** should **fade out other buttons** and move this section **below the order summary.** • The **rating system (5 stars)** should allow users to **select stars** (unselected stars appear **transparent,** selected ones turn **yellow**). Default = **5 stars.** • **Feedback to Improve:** Opens a **text box** where users can write feedback (warning: **"Do not include personal details"**). • **Leave a Review on Google:** Directs users to Google Reviews and **automatically pre-fills rating** based on their selection. • **Follow Us on Social:** Clicking any **social media icon** should **directly open the respective account** and follow MatAll.
FAQs Section	• Clicking **FAQs** should **fade out other buttons** and move **this section below the order summary.** • A **vertically scrollable list** of FAQs should appear. • Clicking on any **question** should **drop down a simple response** (pulled from the

Order Management & Tracking

Order History



Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Order History Display	• Previous orders are **displayed as scrollable tiles (vertical scrolling).** • Each tile represents **one order** with a **side arrow** to expand the order details (same as Order Status screen).
Order Tile Content	• **Top message on each tile:** - "Savings of Rs. XY" - "Delivered in XX mins" • **Order Details within the tile: - Order Value (₹) - Order Date (DD MMM YY format) - Order Time (hh:mm format)** • **Product Images:** Small, thumbnail-style images representing ordered items. • **Action Buttons at the Bottom: - Reorder - Rate Order**
Order Details Expansion	• Clicking the **side arrow** should **expand order details** exactly like the Order Status screen. • Order status (Confirmed, Out for Delivery, Delivered) should be shown dynamically.
Reorder Functionality	• Clicking **Reorder** should: - Add all items from the previous order **directly to the cart.** - Take the user **to the cart screen** for confirmation before checkout.
Rate Order Functionality	• Clicking **Rate Order** should: - **Pop up a 5-star rating system** (default: **5 stars selected**). - Allow users to **update the rating** by tapping on stars. - Ensure selected stars **turn yellow,** and unselected ones are **transparent.**
Performance & Responsiveness	• **All actions should complete within 1-2 seconds.** • **Smooth transitions and animations** for order expansion, rating pop-up, and reorder actions. • **Mobile-responsive design** with proper scaling of product images.

Description

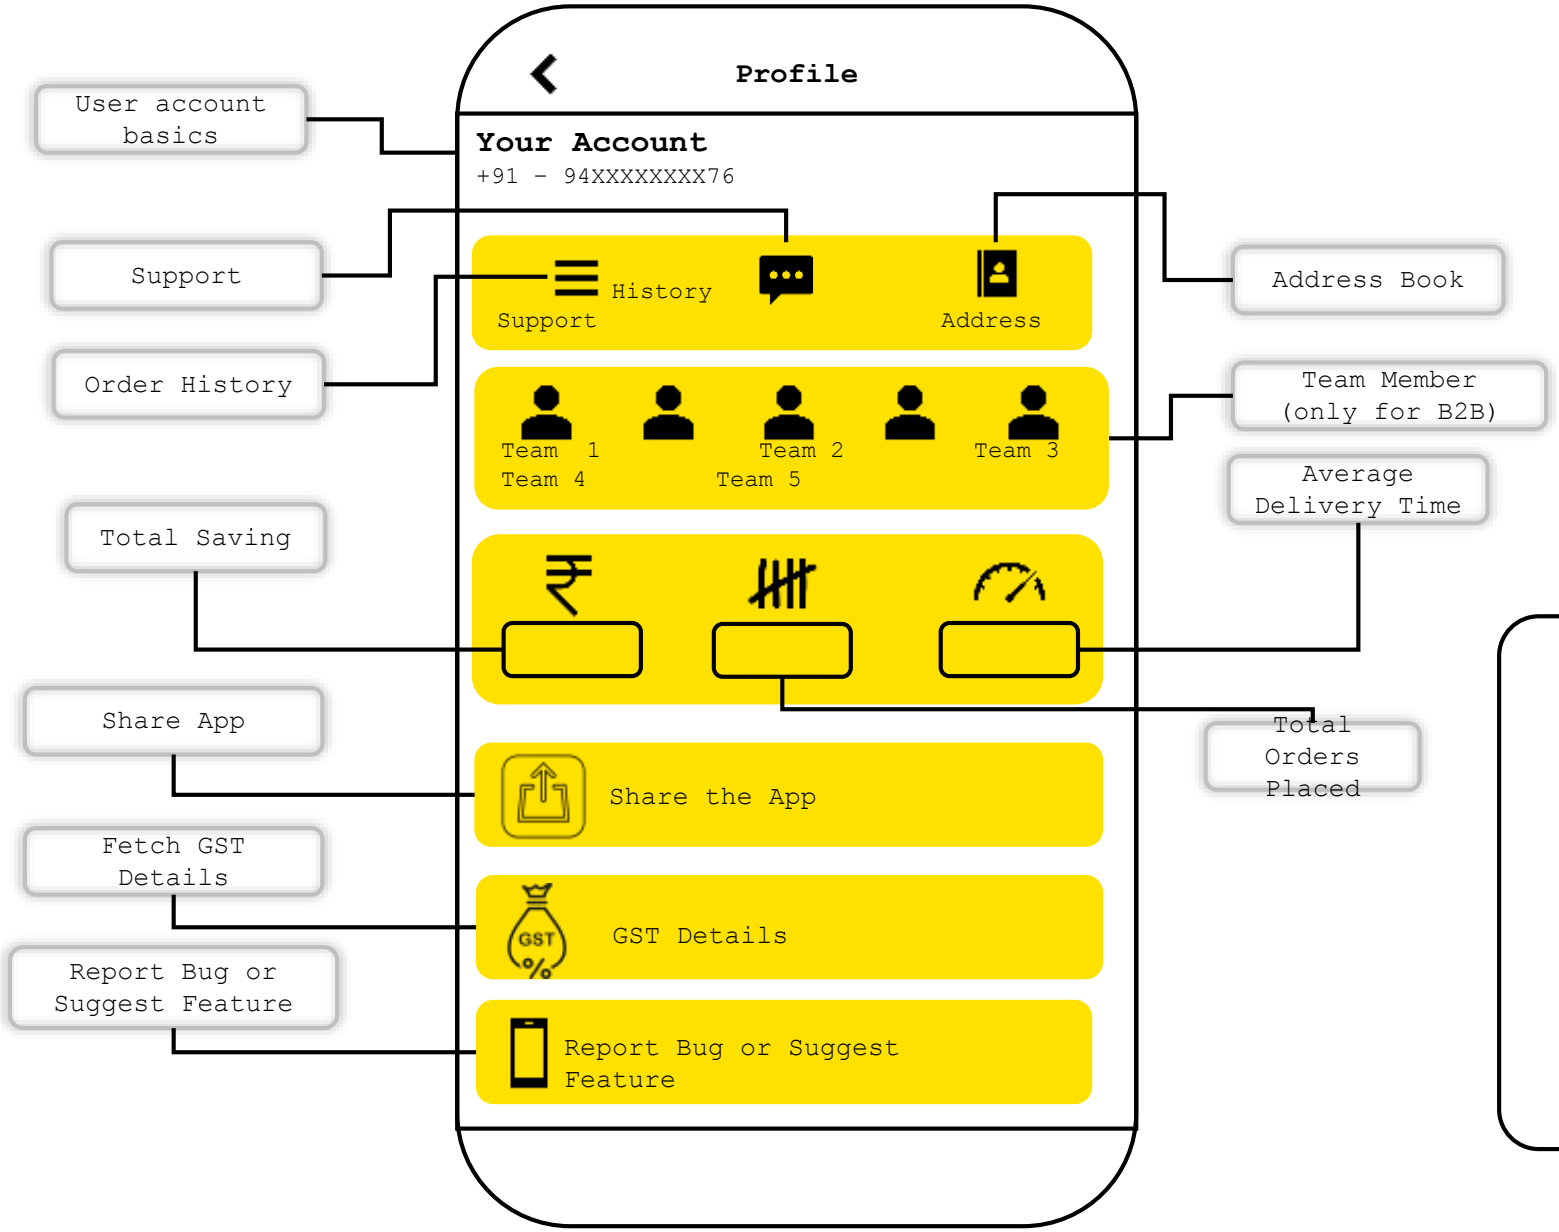
Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Header Section	• **Profile Icon** on the **top-left** corner, displaying user profile. • **Welcome Greeting:** "Hello, [Customer Name]” • **Support Prompt:** "How can we help?" in **bold, large font.**
Support Options (Displayed as Tiles)	• **Chat with Us (on App):** Opens a **new chat screen** within the app. • **Chat with Us (WhatsApp):** Opens WhatsApp for direct chat. • **Policies Section:** Clicking it opens a **new screen with policies** (Return, Privacy, Confidentiality, Data Use, etc.) **displayed as clickable tiles.** • **Call Us (For B2B Users Only):** - Available **only for users with GST details.** - **Happens within the app** (not an external call).

Chat on App Functionality	• Clicking **Chat with Us (on App):**
	• Opens a **new chat screen** with a text input field at the bottom.
	  • User can **send text messages and voice messages (via mic icon).**
	  • Messages should be displayed in a **conversational format (similar to common chat apps).**

WhatsApp Chat Integration	• Clicking **Chat with Us (WhatsApp):** • Redirects to **WhatsApp chat with MatAll's support number.** • Ensures smooth transition without unnecessary app-switch delays.
Policies Screen	• Clicking **Policies** opens a **new screen with policy categories in tile format.** • Each policy tile (e.g., **Return Policy, Privacy Policy**) should be **clickable** to open detailed content.
B2B Call Support	• Clicking **Call Us:** • **Only available for B2B users (GST-verified).** • Displays a **Call us button, UI within the app** (without switching to the phone app). (Like it happens in Uber or Blinkit)
Performance & Responsiveness	• **All actions should complete within 1-2 seconds.** • **Smooth transitions for opening chat screens, WhatsApp, and policy sections.** • **Mobile-friendly design,** ensuring the UI scales well across different screen sizes.

Profile Screen

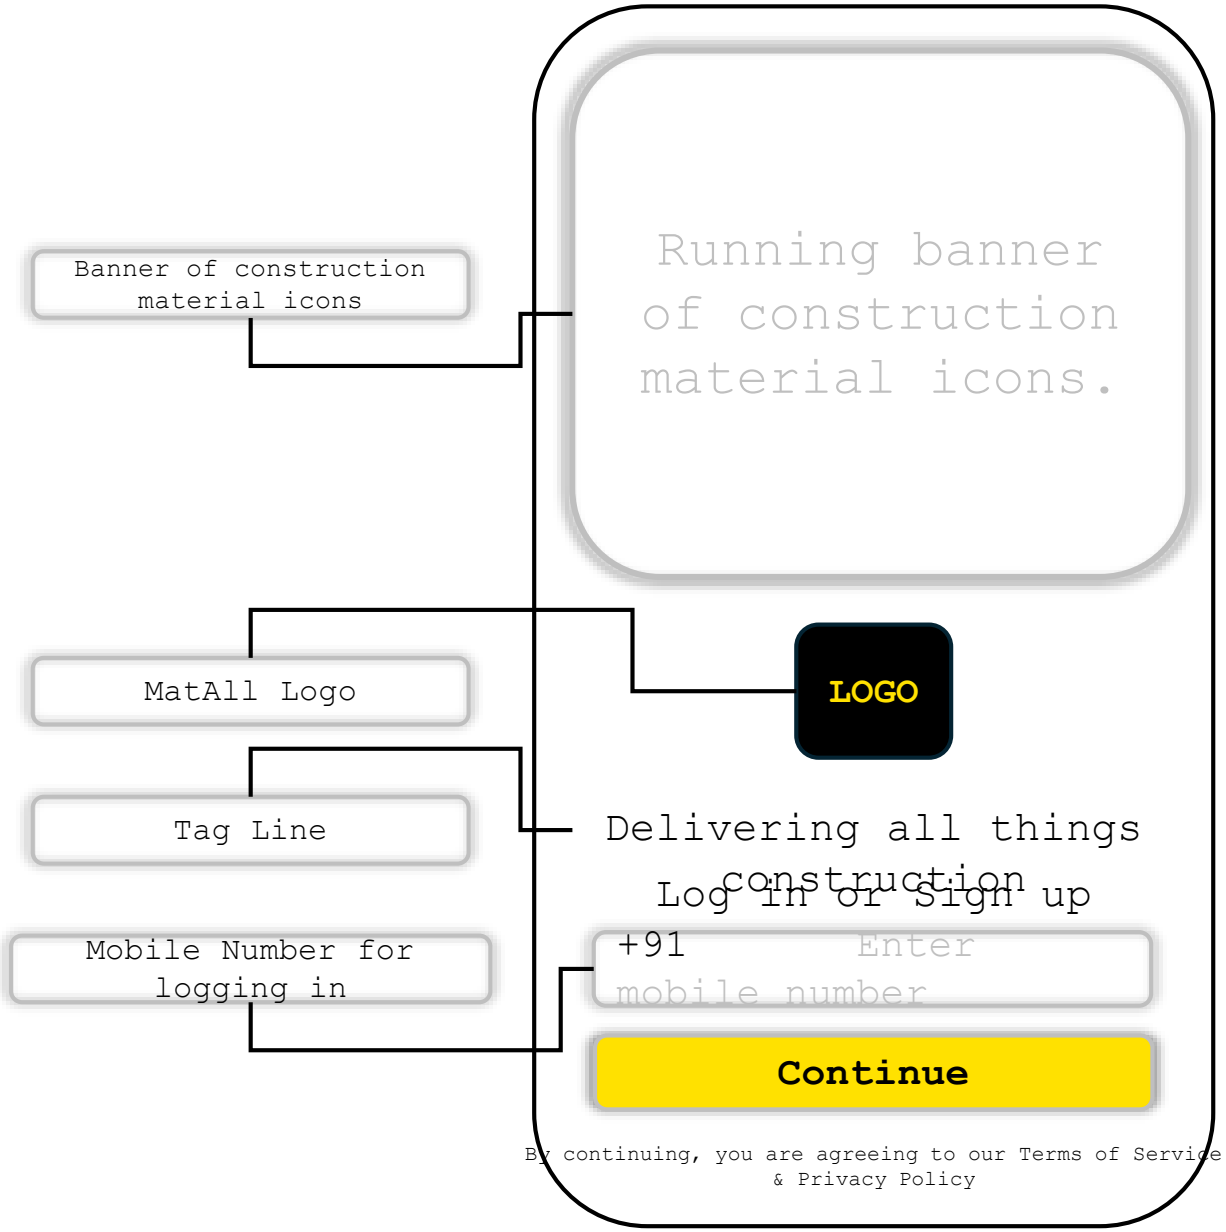


Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Header Section	• **Screen Banner** with "Your Account" text. • **User Details Displayed: - Name & Mobile Number** displayed under "Your Account".
Quick Access Icons (Horizontally Placed in Tile)	• Three icons: **Order History, Support (Chat & Support), Address Book.** • Icons must be **equally spaced and enclosed in a bordered tile.** • Clicking on each icon opens respective screens: - **Order History** → Opens order history screen. - **Support** → Opens chat and support options. - **Address Book** → Opens saved addresses.
Team Management Tile (For B2B Users with GST Details)	• Only **visible for B2B users** who have **entered GST details.** • Displays **team members' icons with names** (users linked to the business account). • Team members **can log in using their mobile** but are attributed to the **business owner.** • **Access Control: Business owner can manage team members' access.**
Basic MIS Tile	• Displays **key business insights: - Total Money Saved** (₹ value) - **Orders Delivered** (total count) - **Average Delivery Time** (in minutes) • Displayed **in a visually engaging format** (e.g., card layout).
Additional Profile Options (Below MIS Tile)	• **Share the App:** Clicking opens **native sharing options** (WhatsApp, Email, etc.). • **GST Details:** Fetches **GST details for paid orders.** • **Report Bug & Suggest Improvement:** Clicking opens **chat support** with an input field for feedback.
Performance & Responsiveness	• **All interactions should complete within 1-2 seconds.** • **Smooth transitions between profile, order history, support, and address book.** • **Consistent UI across different screen sizes.**

Admin Panel

Admin Panel Login Page



What does this screen do?

- Show a glimpse of what all is available on the app.
- Allow people to log-in using their mobile number.
    - They shall receive an OTP (number) as SMS on the phone (which shall be read and auto filled)
    - They shall be able to view further without logging in and have option to login later at order checkout.
- Redirect to Terms of Service & Privacy Policy, if clicked.

Acceptance Criteria:

- Customers can signup using mobile number after receiving the OTP on sms.
- If the customers do not respond within 5 seconds, they are taken to the landing page directly.
- In this case, the signup can be done at checkout (or they can checkout as guest).

Requirement & Acceptance Criteria

Requirement	Acceptance Criteria
Dynamic banner at top that displays tiled images of various products on the app	The banner shall be running and pick images from product image section. The images shall be in small icon squares, moving left to right in a simple slow motion.
Display logo just under the dynamic banner	Logo image is tiled suitably in the center
Provision to input mobile number (Indian provider)	The number shall be pre-approved to logon as admin user (need to have a super admin account to manage this)
	In case number is not complete the **continue** button shall not become active.
	Once the number is entered, it shall generate an OTP on Mobile and WhatsApp (security permitting), which shall be read by the system on OTP screen – leading to auto log-in
Have clickable Terms and Conditions & Privacy Policy	Upon clicking Terms and Conditions, & Privacy Policy, the banner shall open with key pointers with option to click more to read.

- In this case, the signup can be done at checkout (or they can checkout as guest).

Requirement & Acceptance Criteria

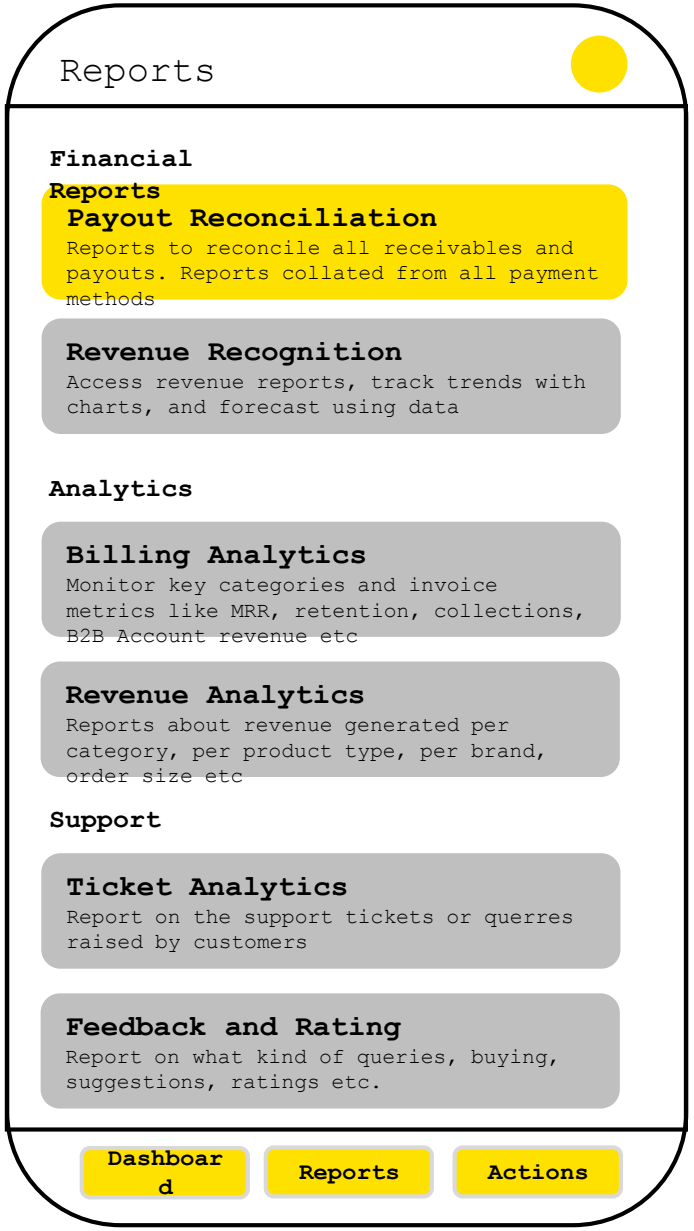
Requirement	Acceptance Criteria

Landing Page with Data Tiles	• **Four data tiles displayed initially:**
	  • **Active Orders** – Orders currently being processed/delivered.
	  • **Active Suppliers** – Suppliers who fulfilled at least one order in the last **15 days.**
	  • **Active Categories** – Categories with **active orders in the last 15 days.**
	  • **Average Delivery Time** – Calculated from **order placement to marked delivery time.**
	• **Tiles should be interactive,** visually distinct, and **refresh in real-time.**

Scrollable Graph Section	• **Revenue & Orders Graphs** displayed below tiles.
	  • **Filters:** Day, Week, Month, Till Date (FY).
	  • **Graph Data Source:** Order history.
	  • **Graph Type:** Bar/line graph format with smooth transitions.
	• **Graphs update dynamically** based on selected filters.

B2B Order Summary	• Dedicated **B2B orders section** (for GST-entered orders). • Displays **total B2B orders, order value, and active B2B buyers.** • Should be **separate from general order data** to track enterprise transactions.
Footer Navigation	• **Icons for:** Dashboard, Reports, and Actions. • Clicking each icon **navigates admin to the respective page.** • **Dashboard (Home Page)** → Returns to main admin panel. • **Reports** → Opens detailed analytics, graphs, and order insights. • **Actions** → Admin controls for supplier/order management.
Performance & Responsiveness	• **Dashboard loads in under 3 seconds** with real-time data updates. • **Graphs should be responsive** and not overlap or clutter the

Reports



Acceptance Criteria:

- Customers can signup using mobile number after receiving the OTP on sms.
- If the customers do not respond within 5 seconds, they are taken to the landing page directly.
- In this case, the signup can be done at checkout (or they can checkout as guest).
